FOREWORD

It is with great pleasure and honour that I write a foreward for the Model Scheme of Instruction and Syllabi for the Undergraduate Engineering Degree Programmes prepared by the All India Board of Undergraduate Studies in Engineering & Technology with Prof. B.S. Sonde as its Chairman and other members. All India Council for Technical Education has the responsibility for uniform development and qualitative growth of the Technical Education system and preparation of syllabi to maintain uniform standards throughout the county. In pursuance to clause 10 (2) of the AICTE Act 1987, AICTE has the objective of bringing about uniformity in the curriculum of Engineering. In that direction, the effort of the All India Board of UG Studies in Engineering & Technology has been quite commendable and praiseworthy. A good effort was made by the Chairman, members of the Board and various Working Groups composed of experts from leading institutions in framing of the Scheme of Instruction and Syllabi. The Board was ably assisted by the official of the Academics Bureau in successfully organizing the meetings, making available necessary documents and follow up action on the minutes of the meetings.

Prof. S. S. Mantha
Chairman
New Delhi
All India Council for Technical Education
PREFACE

For centuries, Universities have been established worldwide as institutions providing higher education and research opportunities to the youth for shaping their future. They have also been recognized as the most important indicators of a nation’s progress. More recently, the UNESCO World Conference on Higher Education (Paris, 1998) has observed that higher education and research act as essential components of culture, socio-economic and environmentally sustainable development of individuals, communities and nations, since the society is now becoming increasingly knowledge-based. As University education in Engineering and Technology (E&T) has a significant role in enhancing their capabilities and competitiveness, the developed nations have been attaching much importance to this sector. This is no exception in India, which has prepared a time table to become a developed nation by the year 2020 and already launched a strategy for this.

Thus, for past some time, India has been laying much emphasis on E&T disciplines at the Universities and also on the setting up of Universities exclusively for E&T and the system has been expanding at a remarkable pace. As a result, many Universities having the Faculty of E&T and E&T Universities themselves have become common in India. These Universities are either unitary, with their academic activities like, Departments/Constituent Colleges restricted to their campuses or affiliating, having their Colleges such as, Affiliated/ Autonomous/ Constituent, spread out in their jurisdiction areas. Besides, India has established many elitist institutions of national importance, such as, Indian Institutes of Technology (IITs) and National Institutes of Technology (NITs) having University level functions in E&T with some of international acclaim.

While these initiatives have enabled the country to provide better access to the youth for higher education in E&T, the diversities in the current University system have inhibited reaching superior levels of quality and standard in the education imparted in most cases, except IITs/NITs and select institutions. It is now a matter of concern that the E&T Curriculum in the Indian University system has not been able to keep pace with the current technological advances on the world scene and a large percentage of E&T graduates are observed to need further education/training to be effective.

Considering this, the Chairman, All India Council for Technical Education (AICTE) had advised the All India Board for UnderGraduate Studies in E&T (AIB UGS (E&T)) to formulate Model Scheme of Instruction and Syllabi for the UG Programmes of Study in E&T at Indian Universities. As over 80% of UG students’ annual intake is mainly for six branches, viz., EC, EE, CS, ME, CE and IT, the framing of Model Scheme/Syllabi was taken up for these in the first instance and the same have been presented in this document. It is hoped that the Model Scheme of Instruction and Syllabi would be of help in revitalizing UG E&T education in the country.

The AIB UGS (E&T) expresses its appreciation at the fine work done and the contribution made by Coordinators/Members of the Working Groups, who have adhered to the guidelines provided and enabled the detailed framing of the Model Scheme of Instruction and Syllabi and also thanks them for their excellent cooperation and mature/learned inputs. The assistance received from the AICTE Academic Bureau in this assignment is also gratefully acknowledged.

Bangalore, 
October 2012
Prof. B. S. Sonde
Chairman, on behalf of AIB UGS (E&T)
INTRODUCTION

1. Background:
The engineering education system in India has witnessed rapid progress in recent years under the guidance, direction and leadership of the All India Council for Technical Education (AICTE) to become one of largest in the world. About 3400 colleges with widely varying governance structures and their locations spread in metro, urban, semi-urban and rural areas, opportunities for studies in over thirty branches of Engineering and Technology (E&T) disciplines and an annual intake of over 1.2 million students constitute its status in 2011-12. Considering the wide diversities in the system and the need to enhance its quality, standard and relevance so that the E&T graduates passing out from the system can meet the 21st century challenges ahead of them, the Chairman, AICTE had desired that a Model Scheme of Instruction and Syllabi for the various programmes of study be proposed by the All India Board for Under Graduate Studies in E&T (AIB UGS (E&T)) of AICTE. The AIB UGS (E&T), after detailed deliberations and associating senior experts from leading institutions in the country, has proposed in this document, a Model Scheme of Instruction and Syllabi for UGS (E&T) for six of the most popular programmes of study now enrolling over 80% of UG (E&T) students in the country. It is expected that the experience gained in implementing the Model Scheme of Instruction and Syllabi as proposed, would be of help to the AIB UGS (E&T) to take up the drafting of Model Scheme of Instruction and Syllabi for the remaining programmes of study.

2. Engineering Education:
It is well known that E&T professionals are key personnel in any country responsible for its economic progress and prosperity, leading to increased comfort and satisfaction levels of its people and the society at large. The developed countries have already benefitted from their knowledge and skills and have demonstrated the crucial role played by these professionals in strengthening their R&D, industries and economies. As India is now engaged in such an endeavour and has prepared a road map for becoming a developed nation by the year 2020, serious efforts are now going on in the country in this direction. In this context, the education and training of E&T professionals are now receiving much attention here. But, there are challenges being faced by these professionals in the on-going 21st century, recognized as the Knowledge Age, like:

1) Rapidly changing technological scene worldwide, with a shrinking time scale for new developments and for obsolescence of old practices, leading to:
   - Increase in investment on R&D in industry and other sectors;
   - Demand for innovative products and services, based on contemporary technologies; and,
   - Growing need for enhancement of abilities to manage change, so frequent, now a days;

2) Globalization and liberalization of Indian industry, leading to:
   - Comprehensive restructuring of industry sector for enhancing efficiency;
   - Increase in world-wide mobility of E&T professionals; and,
   - Growth of competitive environment globally and also in the country;

3) Emergence of new career opportunities for E&T professionals, leading to:
   - Demand for broad-based, flexible education in multi/inter-disciplinary subjects;
• Emphasis on PG courses, research training and institute-industry interaction; and,
• Advances in learner-centric programmes and life-long learning opportunities;

4) Penetration of IT in all sectors of the E&T profession, leading to:
• Increased demand for IT-based solutions to industrial and societal problems;
• Expertise in emerging IT developments to solve complex, E&T problems; and,
• Improved access to worldwide information/data bases and knowledge centres.

5) Increased social/environmental concerns in the E&T context, leading to:
• Effective means for protection of endangered environment and depleting energy sources;
• Seeking environment- and energy-friendly solutions to E&T problems; and.
• Wealth generation using environmentally benign and energy efficient techniques;

These challenges require appropriate orientation of E&T education and research in the country at all levels, particularly at UG and revitalizing the same as outlined below, so that E&T professionals of the 21st century are equipped to face the challenges with determination and courage becoming ready in a short time to contribute to national development.

3. Approach to Curriculum:

As a major objective of E&T education in India now is to develop E&T professionals having competencies, intellectual skills and knowledge equipping them to contribute to the society through productive and satisfying careers as innovators, decision makers and leaders in the national and global economies of the 21st century, the Approach to Curriculum for UG E&T Degree Programmes needs to lay special emphasis on educating/preparing the students well for being able to demonstrate the following abilities:

(a) Effective application of knowledge of mathematics, science and technical subjects;
(b) Planning and design to conduct scientific and technical experiments;
(c) Analysis and interpretation of scientific, technical and economic data collected;
(d) Design of parts, subsystems, systems and/or processes to meet specific needs;
(e) Identification, formulation and solving of problems using simulation or otherwise;
(f) Use of techniques/tools including software in all disciplines, as may be required;
(g) Effective communication skills and leadership/participation in team work;
(h) Fulfillment of professional, social and ethical responsibilities;
(i) Sensitivity to environmental and energy issues and concerns;
(j) Planning, development and implementation of strategies for life-long learning.

These requirements call for the following objectives to the Approach to Curriculum relating to UG students at E&T Degree Programmes in the country:

1) Preparation: To prepare the students to excel in various educational programmes or to succeed in industry / technical profession through further education/training;
2) **Core Competence:** To provide the students with a solid foundation in mathematical, scientific and E&T fundamentals required to solve E&T related problems;

3) **Breadth:** To train the students with a breadth of scientific and E&T knowledge to comprehend, analyze, design & create novel products and solutions for real life problems;

4) **Professionalism:** To inculcate in the students professional/ethical attitude, effective teamwork skills, multidisciplinary approach and to relate E&T issues to a broader context;

5) **Learning Environment:** To provide the students with academic environment of excellence, leadership, ethical guidelines and life-long learning needed for a long/productive career.

4. **Definitions/Descriptions:**

Thus, in framing a suitable curriculum for the **UG E&T Degree Programmes**, the following definitions/descriptions have been followed for the different terms used. This is expected to help in maintaining uniformity of presentation in the **Model Scheme of Instruction and Syllabi** for the various Programmes covered here:

1. **Semester Scheme:** Each **UG E&T Degree Programme** to be ordinarily of 4 academic years (=8 Semesters), with the year being divided into two Semesters of ~ 20 weeks (>=90 working days) each for course work, followed by Continuous Internal Evaluation (CIE) in the Semester & Semester End Examination (SEE) as reforms in Achievement Testing;

2. **Credit System:** A system enabling quantification of course work, with *one credit being assigned to each unit* after a student completes its teaching-learning process, followed by passing in both CIE & SEE; Further, **Choice Based Credit System (CBCS)** to be helpful in customizing the course work for a student, through Core & Electives;

3. **Credit Courses:** All Courses registered by a student in a **Semester** to earn credits; In a widely accepted definition, students to earn **One Credit** by registering and passing:
   - One hour/week/Semester for Theory/Lecture (L) Courses; and,
   - Two hours/week/Semester for Laboratory/Practical(P) Courses or Tutorials (T);

   **NOTE:** Other student activities not demanding intellectual work or enabling proper assessment like, practical training, study tour and guest lecture not to carry Credits;

4. **Credit Representation:** **Credit** values for different academic activities to be represented by following the well accepted practice, as per the example in Table 1:

<table>
<thead>
<tr>
<th>Lectures (hrs/wk/Sem.)</th>
<th>Tutorials (hrs/wk/Sem.)</th>
<th>Practical Work (hrs/wk/Sem.)</th>
<th>Credits (L: T: P)</th>
<th>Total Credits</th>
</tr>
</thead>

<td>2</td>
<td>2:1:1</td>
<td>4</td>
</tr>
</tbody>
</table>
5. **Course Load:** Every student to register for a set of *Courses* in each *Semester*, with the total number of their *Credits* being limited by considering the permissible weekly *Contact Hours* (typically: 30/Week); For this, an average *Course Load* of 22 Credits/Semester (e.g., 6-7 *Courses*) generally acceptable; To include also 3 Units of Non-Credit Mandatory *Courses* in some Semesters, as per the example in Table 2:

<table>
<thead>

<td>3</td>
</tr>
<tr>
<td>Total: Six + one</td>
<td>17:3:2</td>
<td>22</td>
<td>30</td>
</tr>
</tbody>
</table>

* Widely accepted figure ~ 30 hours/week, to enable the students to engage in home work assignments, self-learning outside the Class rooms/Laboratories, Extra/Co-Curricular activities and *add-on Courses*; if any, for their overall development;

6. **Course Flexibility:** *Course work* of students to be made flexible to enable fast, average and slow learners among them to plan and pace the same in a *Semester* as may be necessary and register for more/average/less *Credits* within limits (e.g., +/- 20%) from the prescribed value, based on their learning capacities as observed from *CIE, SEE results in Coursework* in the previous *Semesters*;

7. **Audit Courses:** Students to be able to register for *Courses* outside the prescribed range of *Credits* for *audit* only, when interested to supplement their knowledge/skills; Optional for students to appear/pass in *CIE, SEE* of these courses and/or seek their inclusion in the *Grade cards or Transcripts* issued (but, not for earning *Credit*);

8. **Mandatory Courses:** *Course work* on peripheral subjects in a programme, wherein familiarity considered mandatory; To be included as *non-Credit, Mandatory Courses*, with only a *pass* in each required to qualify for Degree award from the concerned institution; Such *Courses* to be limited to < 5% of the maximum permissible *Course/Credit Load*;

9. **Course Registration:** Every student to formally register for *Courses(Credits)* under faculty advice in each *Semester* for the Institution to maintain proper record; Helpful for monitoring the *CIE, SEE performance* in each case and to assist the students in self-paced learning by dropping/withdrawing from *Course(s)*, and to avail of *Course Flexibility*;

10. **Course Evaluation:** *CIE* and *SEE* to constitute the major evaluations prescribed for each *Course*, with only those students maintaining a minimum standard in *CIE* (to be fixed by
the institution) being permitted to appear in SEE of the Course; CIE and SEE to carry 50% each, to enable each Course to be evaluated for 100 marks, irrespective of its Credits;

11. **CIE**: To be normally conducted by the Course Instructor and include mid-term/weekly/fortnightly class tests, home work, problem solving, group discussion, quiz, mini-project & seminar throughout the Semester, with weightage for the different components being fixed at the institutional level; Instructor also to discuss on CIE performance with students;

12. **SEE**: To be normally conducted at the institutional level and cover the entire Course Syllabi; For this purpose, Syllabi to be modularized and SEE questions to be set from each module, with choice if any, to be confined to module concerned only. The questions to be comprehensive emphasizing analysis, synthesis, design, problems & numerical quantities;

13. **Grading**: To be normally done using Letter Grades as qualitative measure of achievement in each Course like: S(Superior), A(Excellent), B(Very Good), C(Good), D(Average), E(Poor) & F(Fail), based on the marks(%) scored in (CIE+SEE) of the Course and conversion to Grade done by Relative/Absolute Grading, the former being more useful;

14. **Grade Point (GP)**: Students to earn GP for a Course based on its Letter Grade; e.g., on a typical 10-point scale, GP to be: S=10, A=09, B=08, C=07, D=06, E=04 & F=00; Useful to assess students’ achievement quantitatively & to compute Credit Points (CrP)= GP X Credits for the Course; Student passing a Course only when getting GP >= 04 (E Grade);

15. **Grade Point Average (GPA)**: Computation of Semester GPA (SGPA) to be done by dividing the sum of CrP of all Courses by the total number of Cr registered in a Semester, leading finally to CGPA for evaluating student’s performance at the end of two or more Semesters cumulatively; This reform serving as a better performance index than total marks or %;

16. **Passing Standards**: Both SGPA & CGPA serving as useful performance measures in the Semester System; Student to be declared successful at the Semester-end or Programme-end only when getting SGPA or CGPA >= 5.00, with none of the Courses registered in a Semester or for the Degree Award remaining with F Grade;

17. **Credits Required for Degree Award**: Number of Credits to be earned by a student for the UG (E&T) Degree Award fixed by Universities/Institutions to be normally in the range of 160 (20/Sem.) to 200 (25/Sem.); Widely accepted value: 176 (22/Sem.); Also, each student to be successful in the mandatory courses as may be prescribed to qualify for the Degree;

5. **Curriculum Structure**:

A typical Curriculum Structure for UG E&T Degree Programmes evolved as a result of the Approach to Curriculum and Definitions/Descriptions provided above can be broadly as given in Table 3. A suggested breakdown of Credits for use in these programmes in India is also given here.

**Table 3: Typical Curriculum Structure for UG E&T Degree Programmes**

<table>

1. Humanities and Social Sciences (HS), including Management;
2. Basic Sciences (BS) including Mathematics, Physics, Chemistry, Biology;
4. Professional Subjects-Core (PC), relevant to the chosen specialization/branch; *(May be split into Hard (no choice) and Soft (with choice), if required;)*
5. Professional Subjects – Electives (PE), relevant to the chosen specialization/branch;
6. Open Subjects- Electives (OE), from other technical and/or emerging subject areas;
7. Project Work, Seminar and/or Internship in Industry or elsewhere.
8. Mandatory Courses (MC);

<table>

</tbody>
</table>

The suggested Course Work (=176 Credits, at 22/Semester on an average with built-in flexibility of +/- 20% as indicated earlier) in Table 3 needs to be completed successfully by a student to qualify for the award of the UG E&T Degree from the concerned University/Institution. A widely accepted plan for sequencing the Course Work can be as in Table 4:

**Table 4: Typical Sequencing Plan for Courses at UG E&T Degree Programmes**

**6. Methodology Followed:**

It was decided to follow the methodology given below for preparing the Model Scheme of Instruction and Syllabi for the UG E&T Degree Programmes:

1) As a first step, after conducting a scrutiny of all the current UG E&T Degree Programmes in the country, six of the highest intake capacity programmes, viz., EC, EE, CS, ME, CE
and IT were identified to be taken up for preparing their *Model Scheme of Instruction and Syllabi* in the first instance.

2) It was decided that the *Model Scheme of Instruction and Syllabi* for each *Programme* need to be well balanced covering the various subject areas listed in Table 3 and have provision for proper achievement testing of the students in two parts, viz., *CIE* & *SEE* (described earlier in Section 4(11.12)) as given below:

a) For proper achievement testing of the students so necessary in the *Semester Scheme*, good question papers need to be used as the principal tool; For this, the question papers at *CIE* and *SEE* to:

- Cover all sections of the course syllabus uniformly;
- Be unambiguous and free from any defects/errors;
- Emphasize knowledge testing, problem solving & quantitative methods;
- Contain adequate data/ other information on the problems assigned; and,
- Have clear and complete instructions to the students.

b) To meet these requirements, the *Syllabi* to be well drafted, be defect free and be in modular form with a provision for students to answer questions from each module from the syllabus for which the *CIE/SEE* Question Papers to have built in choice in the module;

c) Both *CIE* and *SEE* to be normally of equal (50:50) significance; and, the students’ achievement in a subject to be judged by taking into account the results of both *CIE* and *SEE* together for awarding the Letter Grade and the Grade Point, as indicated earlier.

3) The following *Working Groups* comprising 3-5 Subject Experts in each case were then constituted for each subject area listed in Table 3, to take up the responsibility of framing the *Model Scheme of Instruction and Syllabi*:

a) *HS*, as required for all the programmes (*14 Credits*);
b) *BS*, as required for all the programmes (*30 Credits*);
c) *ES*, as required for all the programmes (*30 Credits*);
d) *PC and PE* for each of the six identified programme (*50 + 20 Credits*);
e) *OE*, as required for all the programmes (*12 Credits*);
f) *Project work* and *Dissertation*, for all the programmes (*20 Credits*);
g) *Mandatory Courses*, for all the programmes (*8 Units*);

The composition of *Working Groups* constituted in this manner is given in Annexure A. The Coordinators and the Members of each *Working Group* were provided with a set of detailed guidelines to assist them in this assignment and to also ensure good uniformity in the *Model Scheme of Instruction and Syllabi* framed by the different *Working Groups*. 
4) Each Working Group was also requested to use the following format for the Model Syllabi to be in accordance with the AICTE Template, to bring in uniformity in its presentation:

(i) **Title of the Course, Hours/Week (L:T:P), Credits** (or Non-Credit, mandatory) in square brackets ([ ]) to be in line 1 **(in bold print)**;

(ii) Syllabus, in modular or unitized form in 5-10 units to be then given, with the number of teaching-learning hours specified for each module **(in normal letter style)**, if possible;

(iii) References: At least 2-3 Text Books and 1-2 Reference Books to be cited for each Course (Author(s), Book Title, Publisher, Edition, Year of Publication) **(in italics)**;

(iv) Pre-requisites for the Course, if any, such as, knowledge of other subjects or other Courses to be given **(in normal letter style)**, if possible;

5) After the Model Syllabi were received from all the Working Groups, the AIB UGS (E&T) took into consideration the various presentations provided, subjected them to editorial corrections/improvements and finalized the Model Scheme of Instruction and Syllabi given in the Chapters that follow.

7. **Expected Educational Outcomes**:

Special attention was also paid to ensure that the Model Scheme of Instruction and Syllabi had built-in provision to enable the following ten educational outcomes from the E&T students passing out of the Universities/Institutions adopting them:

1. Ability to apply the knowledge acquired in subject areas like, *Mathematics, Basic Sciences, Engineering Sciences, Professional Subjects and Environmental Issues*;

2. Strong foundation in theoretical/experimental work for being able to analyze, synthesize and design engineering products, processes and systems as desired;

3. Expertise in collecting field data, designing and conducting experiments in the laboratory/elsewhere and analyzing/interpreting the results;

4. Capacity to function in multi/inter-disciplinary teams with a spirit of tolerance, patience and understanding so necessary for team work;

5. Competence to acquire knowledge on one’s own through libraries/data bases for contributing to knowledge assimilation, creation, dissemination & life-long learning;

6. Better understanding and acceptance of professional, social, moral and ethical responsibilities and good knowledge of contemporary issues;

7. Familiarity with ICT and seeking pollution-free and/or environment- and energy-friendly solutions to day-to-day problems faced by the society at large, based on ICT;

8. Broad education necessary to get a perception of the impact of solutions provided for developmental issues in a global/societal context;

9. Capacity for rational, objective, orderly and logical thinking and ability to communicate with fellow professionals/society effectively in written/oral forms; and,
10. Good attitudes and skills in personnel management and maintenance of human relations, required in every one's working life.

8. Future Steps to be Taken:

The Model Scheme of Instruction and Syllabi proposed for the six chosen programmes of study are indeed at the current state of the art and they are suitable for being followed in the country at Technological/Other Universities/University level Institutions and Autonomous Colleges. Therefore, AICTE may take the following steps in the immediate future to ensure that the Scheme/Syllabi are widely adopted:

- The availability of Model Scheme of Instruction and Syllabi for the six chosen Programmes of Study may be publicized widely on the Web Site or otherwise;
- Selected institutions may be encouraged to adopt the Scheme/Syllabi on experimental basis or use them as guidelines and their experience utilized to make future plans;
- The experience gained may be used to initiate steps to improve and update the Scheme/Syllabi to be contemporary on a continuing basis;
- The feedback received from the institutions may also form the basis for taking steps to formulate such Schemes/Syllabi for other Programmes of Study;
- Institutions following the Scheme/Syllabi may be facilitated with autonomy, if needed, to benefit from CBCS and related Academic/Examination Reforms in E&T Programmes;

The Lists of Courses Identified as per the Curriculum Structure discussed are now given category-wise together with the proposed Credits and the preferred Semester in each case, followed by the Model Syllabi for Common Courses and the Model Scheme of Instruction and Syllabi for each of the five identified Programmes of Study, viz., EC, EE, CS, ME, CE in the Chapters that follow. And, the Model Scheme of Instruction and Syllabi for the sixth identified programme, viz., IT is presented as Supplement to this Volume.
CHAPTER II
LISTS OF COURSES IDENTIFIED

1. Preamble:

The lists of courses, as identified by all the Working Groups constituted for the UG (E&T) programmes in the chosen branches and approved by AIB UGS (E&T) for their suitability to be used at Technical Universities/Institutions in India in the 21st century are given below in tabular form subject areawise, viz., HS, BS, ES, PC/PE branchwise (EC, EE, CS, ME, CE, IT), OE, MC and Project Work. In each case, the Course code, Course Title, suggested Instruction Hours/Week (in L:T: P format), Credits assigned and Preferred Semester for teaching/learning are indicated for ease of convenience and use by the academic community. However, the institutions may vary both L: T: P and Preferred Semester to some extent based on their experience/needs and the available faculty strength/competence.

2. The Lists:

### Elective Courses:

#### ME Electives:

1. **MEx38**
   - **Course Title:** Nuclear Power Generation and Supply
   - **Design:** 3: 0: 0
   - **Credits:** 3
   - **Preferred Semester:** V-VIII

2. **MEx39**
   - **Course Title:** Quantity Production Methods
   - **Design:** 3: 0: 0
   - **Credits:** 3
   - **Preferred Semester:** V-VIII

3. **MEx40**
   - **Course Title:** Theory of Combustion and Emission
   - **Design:** 3: 0: 0
   - **Credits:** 3
   - **Preferred Semester:** V-VIII

4. **MEx41**
   - **Course Title:** Computational Fluid Dynamics
   - **Design:** 3: 0: 0
   - **Credits:** 3
   - **Preferred Semester:** V-VIII

5. **MEx 42**
   - **Course Title:** Robotics: Mechanics and Control
   - **Design:** 2: 0: 0
   - **Credits:** 3
   - **Preferred Semester:** V-VIII

6. **ME P1**
   - **Course Title:** Project Work I
   - **Design:** 0: 0: 8
   - **Credits:** 4
   - **Preferred Semester:** VII

7. **ME P2**
   - **Course Title:** Project Work II & Dissertation
   - **Design:** 0: 0: 32
   - **Credits:** 16
   - **Preferred Semester:** VIII

(Note: Electives in four groups: ME*, ME^, ME+, MEx)

CHAPTER III
MODEL SYLLABI FOR COMMON COURSES

(a) HUMANITIES AND SOCIAL SCIENCES

HS 01: Sociology & Elements of Indian History for Engineers
3:0:0 [3]

The objective of this course is to familiarize the prospective engineers with elements of Indian history and sociological concepts and theories by which they could understand contemporary issues and problems in Indian society. The course would enable them to analyze critically the social processes of globalization, modernization and social change. All of this is a part of the quest to help the students imbibe such skills that will enhance them to be better citizens and human beings at their work place or in the family or in other social institutions.

Module 1A: Introduction to Elements of Indian History: What is history? ; History Sources- Archaeology, Numismatics, Epigraphy & Archival research; Methods used in History; History & historiography; (3 Lectures)

Module 1B: Introduction to sociological concepts-structure, system, organization, social institutions, Culture social stratification (caste, class, gender, power).State & civil society; (7 Lectures)

Module 2A: Indian history & periodization; evolution of urbanization process: first, second & third phase of urbanization; Evolution of polity; early states to empires; Understanding social structures-feudalism debate; (3 Lectures)

Module 2B: Understanding social structure and social processes: Perspectives of Marx, Weber & Durkheim; (7 Lectures)

Module 3A: From Feudalism to colonialism-the coming of British; Modernity & struggle for independence; (3 Lectures)

Module 3B: Political economy of Indian society. Industrial, Urban, Agrarian and Tribal society; Caste, Class, Ethnicity and Gender; Ecology and Environment; (9 Lectures)

Module 4A: Issues & concerns in post-colonial India (up to 1991); Issues & concerns in post-colonial India 2nd phase (LPG decade post 1991) (3 Lectures)

Module 4B: Social change in contemporary India: Modernization and globalization, Secularism and communalism, Nature of development, Processes of social exclusion and inclusion, Changing nature of work and organization (10 Lectures)

Text/Reference Books:

(a) History

1. Desai, A.R. (2005), Social Background of Indian Nationalism, Popular Prakashan
HS 02: Economics for Engineers

The objective of this course is to familiarize the prospective engineers with elementary principles of economics. It also deals with acquainting the students with standard concepts and tools that they are likely to find useful in their profession when employed in the firm/industry/corporation in public or private sector. It also seeks to create and awareness about the status of the current economic parameters /indicators/ policy debates. All of this is a part of the quest to help the students imbibe soft skills that will enhance their employability.

**Text/Reference Books:**

**HS 03: Law for Engineers**

The objective of the course is to familiarize students (Prospective engineers) with elementary knowledge of laws that would be of utility in their profession. The syllabus covers Constitution of India and new areas of law like IPR, ADR, Human Rights, Right to Information, Corporate law, Law relating Elections and Gender Studies. To be supplemented by the historical development of laws wherever required.

**Module 1A: Constitutional Law** covering the Preamble; Fundamental Rights, Judicial Activism including Equality and Social Justice, Life and Personal Liberty and Secularism and Religious freedoms; Directive principles of State policy; Fundamental Duties; Emergency provisions – kinds, legal requirements and legal effects; (5 Lectures)

**Module 1B: Human Rights and Public International Law** covering Human Rights in International Law-Theoretical foundation, human rights and international law; Historical development of human rights; Human Rights in Indian tradition and Western tradition; Covenant on Civil & Political Rights 1966 including Optional Protocol – I (Individual Complaint Mechanism) & Optional Protocol – II (Abolition of Death Penalty); Covenant on Economic, Social and Cultural Rights 1966 including Optional Protocol – I (2002); UN Mechanism and specialized agencies, (UNICEF, UNESCO, WHO, ILO, FAO, etc.); International NGOs – Amnesty International, Human Rights Watch, Greenpeace Foundation; Enforcement of Human Rights in India including Supreme Court, High Courts, Statutory Commissions – NHRC, NCW, NCM, NC-SCST etc. Public International Law, covering Introduction, Customs, Treaties, State territories including Recognition of States and governments, Law & Practice of Treaties and Law of Sea; (5 Lectures)

**Module 2A: General Principles of Contract under Indian Contract Act, 1872** covering General principles of contract – Sec. 1 to 75 of Indian Contract Act and including Government as contracting party, Kinds of government contracts and dispute settlement, Standard form contracts; nature, advantages, unilateral character, principles of protection against possibility of exploitation, judicial approach to such contracts, exemption clauses, clash between two standard form contracts; (4 Lectures)

**Module 2B: Arbitration, Conciliation and ADR system** covering Arbitration – meaning, scope and types – distinction between law of 1940 and 1996; UNCITRAL model law – Arbitration and expert determination; Extent of judicial intervention; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal – appointment, challenge, jurisdiction of arbitral tribunal, powers, ground of challenge, procedure and court assistance; Award including Form and content, Grounds for setting aside an award, Enforcement, Appeal and Revision; Enforcement of foreign awards – New York Convention Awards and Geneva Convention Awards; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality, resort to judicial proceedings, costs; (5 Lectures)
Module 3A: Law relating to Intellectual property covering Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Other new forms such as plant varieties and geographical indications; International instruments on IP – Berne convention, Rome convention, TRIPS, Paris convention and international organizations relating IPRs, WIPO, WTO etc; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – literary, dramatic and musical works, sound records and cinematographic films, computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relating to Trademarks under Trademark Act, 1999 including Rationale of protection of trademarks as Commercial aspect and Consumer rights, Trademarks, registration, procedures, Distinction between trademark and property mark, Doctrine of deceptive similarity, Passing off an infringement and remedies; Law relating to Patents under Patents Act, 1970 including Concept and historical perspective of patents law in India, Patentable inventions with special reference to biotechnology products, Patent protection for computer programs, Process of obtaining patent – application, examination, opposition and sealing of patents, Patent cooperation treaty and grounds for opposition, Rights and obligations of patentee, Duration of patents – law and policy considerations, Infringement and related remedies; (8 Lectures)

Module 3B: Right to Information Act, 2005 covering, Evolution and concept; Practice and procedures; Official Secret Act, 1923; Indian Evidence Act, 1872; Information Technology – legislation and procedures, Cyber crimes – issues and investigations; (3 Lectures)

Module 4A: Labour Laws, covering Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen’s Compensation Act, 1923; (3 Lectures)

Module 4B: Corporate Law, covering Meaning of corporation; Law relating to companies, public and private (Companies Act, 1956) general provisions; Law and multinational companies – International norms for control, FEMA 1999, collaboration agreements for technology transfer; Corporate liability, civil and criminal; (4 Lectures)

Module 4C: Election provisions under Indian Constitution (Art.324–329), covering Representation of Peoples Act and Prevention of Corruption Act, 1988; Superintendence, directions and control of elections to be vested in Election Commission; Prohibition as to ineligibility for inclusion in electoral roll on ground of religion, race, caste or sex; Election to the house of people and to the legislative assemblies of States to be on the basis of adult suffrage; Power of parliament to make provisions with respect to elections to legislatures; Power of legislature of State to make provisions with respect to elections to such legislature; Bar to interference by courts in electoral matters; Offences relating to elections under IPC 1860 (Sec.171-A to 171-I), Definition – candidate electoral rights, Bribery, undue influence and impersonation at elections and punishments, False statement in connection with election, Illegal payment in connection with election, Failure to keep election accounts; (4 Lectures)

Module 5: Gender Studies, covering Meaning of gender, international perspective and national perspective; Laws relating women in India; Judicial approach and responses- Vishaka V/s State of Rajasthan 1997 SC; Rights enforcement mechanism in India; Landmark judicial decisions of Supreme Court relating to women; (4 Lectures)

**HS 04: Business Communication and Presentation Skills 2:2:4 [5]**

The objective of this course is to develop communication competence in prospective engineers so that they are able to communicate information as well as their thoughts and ideas with clarity and precision. This course will also equip them with the basic skills required for a variety of practical applications of communication such as applying for a job, writing reports and proposals, facing an interview and participating in a group discussion. Further, it will make them aware of the new developments in technical communication that have become part of business organizations today.

**Module 1A: Business communication** covering, Role of communication in information age; concept and meaning of communication; skills necessary for technical communication; Communications in a technical organization; Barriers to the process of communication and sola; (3 Lectures)
Module 1B: Style and organization in technical communication covering, Listening, speaking, reading and writing as skills; Objectivity, clarity, precision as defining features of technical communication; Various types of business writing: Letters, reports, notes, memos; Language and format of various types of business letters; Language and style of reports; Report writing strategies; Analysis of a sample report; (4 Lectures)

Module 2A: Communication and personality development covering, Psychological aspects of communication, cognition as a part of communication; Emotional Intelligence; Politeness and Etiquette in communication; Cultural factors that influence communication; Mannerisms to be avoided in communication; Language and persuasion; Language and conflict resolution; (3 Lectures)

Module 2B: Language Laboratory emphasizing Listening and comprehension skills; Reading Skills; Sound Structure of English and intonation patterns; (5 Sessions)

Module 3A: Oral Presentation and professional speaking covering, Basics of English pronunciation; Elements of effective presentation; Body Language and use of voice during presentation; Connecting with the audience during presentation; Projecting a positive image while speaking; Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Basics of public speaking; Preparing for a speech; (3 Lectures)

Module 3B: Career Oriented Communication covering, Resume and biodata: Design & style; Applying for a job: Language and format of job application. Job Interviews: purpose and process; How to prepare for interviews; Language and style to be used in interview; Types of interview questions and how to answer them; Group Discussion: structure and dynamics; Techniques of effective participation in group discussion; Preparing for group discussion; (5 Lectures)

Module 3C: Advanced Techniques in Technical Communication covering, Interview through telephone/video-conferencing; Power-point presentation: structure and format; Using e-mail for business communication; Standard e-mail practices; Language in e-mail; Using internet for collecting information; Referencing while using internet materials for project reports; Writing for the media; (2 Lectures)

Module 4: Language laboratory training in speaking skills covering oral presentations, mock interviews and model group discussions through the choice of appropriate programmes; (5 Sessions)

The syllabus of Environmental sciences provides an integrated, quantitative and interdisciplinary approach to the study of environmental systems. The students of Engineering undergoing this Course would develop a better understanding of human relationships, perceptions and policies towards the environment and focus on design and technology for improving environmental quality. Their exposure to subjects like understanding of earth processes, evaluating alternative energy systems, pollution control and mitigation, natural resource management and the effects of global climate change will help the students bring a systems approach to the analysis of environmental problems;

Module 1A: Concepts of Environmental Sciences covering, Environment, Levels of organizations in environment, Structure and functions in an ecosystem; Biosphere, its Origin and distribution on land, in water and in air, Broad nature of chemical composition of plants and animals; (3 Lectures)

Module 1B: Natural Resources covering Renewable and Non-renewable Resources, Forests, water, minerals, Food and land (with example of one case study); Energy, Growing energy needs, energy sources (conventional and alternative); (3 Lectures)

Module 2A: Biodiversity and its conservation covering, Biodiversity at global, national and local levels; India as a mega-diversity nation; Threats to biodiversity (biotic, abiotic stresses), and strategies for conservation; (3 Lectures)

Module 2B: Environmental Pollution covering, Types of pollution- Air, water (including urban, rural, marine), soil, noise, thermal, nuclear; Pollution prevention; Management of pollution- Rural/Urban/Industrial waste management [with case study of any one type, e.g., power (thermal/nuclear), fertilizer, tannin, leather, chemical, sugar], Solid/Liquid waste management, disaster management; (3 Lectures)

Module 2C: Environmental Biotechnology covering, Biotechnology for environmental protection- Biological indicators, bio-sensors; Remedial measures- Bio-remediation, phyto-remediation, bio-pesticides, bio-fertilizers; Bio-reactors- Design and application (3 Lectures)

Module 3A: Social Issues and Environment covering, Problems relating to urban environment- Population pressure, water scarcity, industrialization; remedial measures; Climate change-Reasons, effects (global warming, ozone layer depletion, acid rain) with one case study; Legal issues- Environmental legislation (Acts and issues involved), Environmental ethics; (5 Lectures)

Module 3B: Environmental Monitoring covering, Monitoring- Identification of environmental problem, tools for monitoring (remote sensing, GIS); Sampling strategies- Air, water, soil sampling techniques (3 Lectures)

Module 4: Laboratory Work including Practical and Field Work covering, Plotting of biogeographical zones and expanse of territorial waters on the map of India; Identification of biological resources (plants, animals, birds) at a specific location; Determination of (i) pH value, (ii) water holding capacity and (iii) electrical conductivity of different types of soils; Determination of energy content of plants by bomb calorimeter; Measurement and classification of noise pollution; Determination of particulate matter from an industrial area by high volume sampler;
Determination of ico-chemical parameters (pH, alkalinity, acidity, salinity, COD, BOD) of tap water, well water, rural water supply industrial effluent and sea water & potability issues; Demonstration of Remote Sensing and GIS methods; Industrial visit for environmental biotechnology processes (e.g., any one of the fermentation, tissue culture, pharmaceutical industries); (15 Sessions)

(b) BASIC SCIENCES

(i) Mathematics

BS 01: Elementary Mathematics for Engineers 2:0:0 [2]

The objective of this course is to familiarize the students with elements of mathematics. It acquaints the students with standard concepts and tools that will serve as building blocks towards tackling more advanced level of mathematics that they are likely to find useful in their profession when employed in the firm/industry/corporation in public or private sector. It also seeks to help the students imbibe/inculcate analytical rigor and discipline that is essential in any scientific endeavor. This is specially designed for students to help them bring to speed with other students who have already had some training in mathematics at the 12th Standard level.

Module 1: Elements of Logic covering, necessary and sufficient conditions, theorems and proofs (direct and contra positive); Sets and Functions – elementary set theoretic operations, De Morgan’s
law, Convex sets, Relations and Correspondences, number systems; Modulus function (distance), sequences and series – convergence; Open and closed sets; Limits and Continuity; (10 Lectures)

**Module 2: Differential and Integral Calculus** covering, concept of a derivative, standard rules of differentiation (including elementary trigonometric and transcendental functions), total and partial derivatives, Young’s theorem, homogeneous functions, trace of a curve; Maxima and Minima; Integration- basic concept, definite and indefinite integral, standard rules of integration, partial integration; Ordinary (first order) differential equation; (10 Lectures)

**Module 3: Linear Mathematics** covering, Matrices (types and operations including elementary row and column operations), inverse; Determinants (rules of computation); Linear Equations and Cramer’s rule; Vector space (concepts of span/basis/dimension); Eigen values and Eigen vectors; Linear Programming (Graphical and Simplex solution); First order Difference equation (First order equations and solution); (10 Lectures)

**BS 02: Multivariate Analysis, Linear Algebra and Special Functions**  
3:0:0  [3]

The objective of this course is to familiarize the prospective engineers with techniques in multivariate analysis, linear algebra and some useful special functions. It deals with acquainting the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their profession.

**Module 1: Multivariate functions** covering, limits, continuity and differentials, partial derivatives, maximum-minimum problems, Lagrangians, Chain rule; Double integrals, iterated integrals, triple integrals, line integrals, simple connected regions, Green’s theorem; Path independence, surface integrals, Stokes theorem; Fourier series and integral, Dirichlet conditions, Parseval’s identity. The convolution theorem; (15 Lectures)

**Module 2: Vectors** covering, laws of vector algebra, operations- dot, cross, triple products; Vector function – limits, continuity and derivatives, geometric interpretation; Gradient, divergence and curl – formulae; Orthogonal curvilinear coordinates; Jacobians, gradient, divergence, curl and Laplacian in curvilinear coordinates; Special curvilinear coordinates; (15 Lectures)

**Module 3: Gama Beta and other Special Functions** covering, the Gama function, values and graph, asymptotic formula for T(n)l The Beta function – Dirichlet integral; Other special functions – Error function, exponential integral, sine and cosine integrals, Bessel’s differential equation and function (first and second kind), Legendre differential equation and polynomials; Some applications; (15 Lectures)

**BS 03: Differential Equations**  
3:0:0  [3]

Differential equations play a major role in understanding many processes and systems that are of interest to the engineers in a generic sense. An in-depth understanding of the ordinary and higher order differential equation as well as partial differential equations are an absolutely essential part of the tool-kit of a well trained engineer. This course fills into this perceived need. The treatment should be informed by the fact that not only conceptual but also (and in some cases) more importantly numerical or computational methods are of essence.
Module 1: Differential equations of higher order, existence and uniqueness of solutions; Some engineering applications (mechanics and electric circuits); Numerical methods for solutions; (15 Lectures)

Module 2: General Linear Differential Equation of order n; Linear Operators; Fundamental theorem on linear differential equations; Solutions for constant coefficients; The non-operator techniques; The complementary solution of homogeneous equation, the particular solution; Method of reduction of order and inverse operators; Linear equations with variable coefficients; Simultaneous differential equations; Applications; (15 Lectures)

Module 3: Definitions; Linear Partial differential equations – some important equations, the heat equation, vibrating string, Laplace equation, longitudinal and transverse vibrations of a beam; Methods of solving boundary value problems; General solution, separation of variables; Laplace transform methods; (15 Lectures)

BS 04: Complex Analysis

The objective of this course is to familiarize the students, in some detail, about the analysis on Complex Number field. The central idea of analytic functions and the various series and ransformations will find ready application in many branches of engineering.

Module 1: Complex Numbers covering, Functions Analysis including limits and continuity, derivatives; Cauchy Riemann Equations; Integrals, Cauchy theorem and Cauchy integral formulae; Analytic Functions; Taylor’s series, Singular points and poles; Laurent’s Series, Residues, Residue Theorem; (10 Lectures)

Module 2: Evaluation of definite integrals covering, Conformal mapping, Riemann’s mapping theorem; Some general transformations, mapping a half plane into a circle; The Schwarz-Christoffel transformation; The solution of Laplace equation by conformal mapping; (10 Lectures)

Module 3: The complex inverse formula covering, the Bromwich contour, the use of Residue theorem in finding Laplace transforms; A sufficient condition for the integral around T to approach zero; The case of infinitely many singularities; Application to boundary value problems; (10 Lectures)

BS 05: Optimization and Calculus of Variations

This course deals with the extremely important topics under the broad umbrella of optimization. This is synonymous with efficiency which is the underlying prime rationale for all scientific and technological advances and progress.

Module 1: First and second order conditions for local interior optima (concavity and uniqueness), Sufficient conditions for unique global optima; Constrained optimization with Lagrange multipliers; Sufficient conditions for optima with equality and inequality constraints; Kuhn Tucker conditions, duality; (10 Lectures)

Module 2: Linear programming covering, Basic LPP – solution techniques (Simplex, Artificial Basis); Complimentary Slackness Theorem, Fundamental theorem of Duality; Degenerate
Module 3: Calculus of Variations covering, Basic definition, Simplest problem, Isoperimetric problem, Problems with Higher order derivatives, Euler Lagrange Equation, Weierstrass-Erdmann conditions; Pontryagin Maximum Principle; Transversality condition; Applications; (10 Lectures)

BS 06: Probability and Statistics 2:0:0 [2]

Uncertainty is ubiquitous. It is therefore essential to understand the techniques for handling and modeling it. This course is meant to provide a grounding in Statistics and foundational concepts that can be applied in modelling processes and decision making. These would come in handy for the prospective engineers in most branches.

Module 1: Mathematical Statistics covering, Population, Sample space, Events, Random Variables; Definitions of probability, conditional Probability, expectation and higher order moments, distributions (pdf), examples of (discrete and continuous) Normal, Poisson, Binomial distributions. Characteristic functions (mean and standard deviation); (10 Lectures)

Module 2: Regression covering, OLS (single and multivariate cases), Estimators and their properties (unbiased, consistent), Gauss-Markov Theorem; Limitations of OLS- Heteroscedasticity, multi-collinearity; Limit theorems and convergence of random variables; (10 Lectures)

Module 3: Hypothesis testing covering, Types of Error, Power of a test, Goodness of a fit, Student t and Chi square; Sufficient Statistic and MLEs; Limit theorems and convergence of random variables; Elementary concepts related to stochastic processes; Forecasting and Modeling applications; (10 Lectures)

BS 07: Discrete Mathematics 2:0:0 [2]

Whereas continuous processes are analytically tractable in an elegant manner, most real life situations present themselves as comprising of discrete variables. It is therefore essential to have knowledge of discrete mathematics in one’s tool-kit. This course is meant to deeply familiarize the students with difference equations and their solution techniques. It also deals with concepts and techniques of graph theory, and Lattices apart from applications using optimal control and filters.

Module 1: Difference equations covering, first order, second order and nth order, with integer argument and their solutions; First order, second order, nth order, with continuous variables and their solutions; The state space form & Kalman-Bucy filter, Riccati Matrices (Equations) and applications; (15 Lectures)

Module 2: Graph theory covering, concepts and definitions, basic results, trees and cut sets; Definitions and basic results of Lattice theory; Basic Combinatorial analysis; Introduction to Number theory and applications to cryptography’ Finite Markov chains; (15 Lectures)

BS 08: Fuzzy Mathematics 2:0:0 [2]
Most of the mathematics and applications are based on ‘hard’ concepts from set theory. However in recent times, the idea of fuzzy mathematics has taken root. Some of the advances in the arena have found applications in real-life problems related to design and functioning of systems. The course introduces the students to these developments and familiarizes them with conceptual underpinning and makes them aware of some interesting applications.

Module 1: Definition of a Fuzzy set; Elements of Fuzzy logic. Relations including, Operations, reflexivity, symmetry and transitivity; Pattern Classification based on fuzzy relations; Fuzzy analysis including metric spaces, distances between fuzzy sets, area perimeter, height, width of fuzzy subsets, continuity and integrals; Applications; (15 Lectures)

Module 2: Paths and connectedness; Clusters including cluster analysis and modelling information systems, applications; Connectivity in fuzzy graphs, application in database theory; Applications to neural networks; Fuzzy algebra including Fuzzy substructures of algebraic structures, Fuzzy subgroups, pattern recognition and coding theory; (15 Lectures)

Note Regarding Text/Reference Books:

Any book on Fundamental Methods of Mathematics for Engineers will work for the first course (Semester I- 2 credit) and may be chosen as per the taste of the individual teacher and of course local availability. As far as the other courses are concerned, there are umpteen books available (Marsden, Thromba and Weinstein/ Kreszig/ Sean Mauch/ Andrei Polyanin & Alexander Manzhurov (which is a handbook and can serve as a source book)/ Montgomery and Runger (for Statistics)/ John Mordeson & Premchand Nair (for Fuzzy Mathematics). Given that this is a course for Engineers with emphasis on application and computation and problem solving the relevant Book in Schaum Outline Series (especially the one by Murray Spiegel on Advanced Mathematics for Engineers) will do very well. Again the local availability and individual taste could well determine the particular text to be followed by an institution, provided it has the scope and the coverage intended.

(ii) Physics

The aim of courses in Physics is to provide an adequate exposure and develop insight about the basic principles of physics along with the possible applications. The acquaintance of basic physics principles would help engineers to understand the tools and techniques used in the industry and provide the necessary foundations for inculcating innovative approaches. This would create awareness about the vital role played by science and engineering in the development of new technologies. The courses would provide the necessary exposure to the practical aspects, which is an essential component for learning science.

BS 09: Applied Physics I 2:0:0 [2]

Module 1: Optics and Imaging covering, Ray Optics – Lens aberrations (chromatic, achromatic, spherical, distortion, astigmatism, coma), measures of correct aberrations; Interference – coherence (spatial, temporal) in thin films of uniform thickness (derivation); Diffraction Grating – use as a monochromator; Imaging including importance, types of imaging (microscopes, telescopes, cameras etc.); Classification (visible, IR, electron, magnetic, UV/X-rays, gamma rays, microwaves); Comparative study of different types of imaging (with respect to magnification, resolution, image quality, applications); Fiber Optics including Introduction, Optical fiber as a dielectric wave guide- total internal reflection, Numerical aperture and various fiber parameters, losses associated with optical fibers, step index and graded index fibers, application of optical fibers; (8 Lectures)
Module 2: Elastic Properties of materials and Waves and Vibrations covering. Relation between elastic constants, internal bending moment, bending of beams- cantilever, torsion of a cylinder, torsional rigidity; Simple harmonic motion – its expression and differential equation, superposition of two linear SHM’s (with same frequency), Lissajous’ figures; Damped vibration – differential equation and its solution, critical damping, Logarithmic decrement, Analogy with electric circuits; Forced vibration – differential equation, Amplitude and velocity resonance, Sharpness of resonance and Quality factor; (7 Lectures)

Module 3: Sound covering, Definitions: Velocity, frequency, wavelength, intensity, loudness (expression), timber, of sound, reflection of sound, echo; Reverberation, reverberation time, Sabine’s formula, remedies over reverberation; Absorption of sound, absorbent materials; Conditions for good acoustics of a building; Noise, its effects and remedies; Ultrasonics – Production of ultrasonics by Piezo-electric and magnetostriction; Detection of ultrasonics; Engineering applications of Ultrasonics (Non-destructive testing, cavitation, measurement of gauge); Infrasound – Seismography (concept only); (7 Lectures)

Module 4: Measurements and Errors covering Measurand, precision, accuracy, certainty, resolution; Errors - types and sources of errors (definitions and examples). Systematic error, Random error, Ambiguity error, Dynamic error, Drift, Noise; Elements of statistics including precision and variance; Propagation of error with example of Wheatstone bridge; Design of instrument/experiment, Specifications including Measurand, Utility of Measurand, Environment of instrument; Accomplishment of design including commercial availability of components, detectors, displays, energy sources etc; Estimation and minimization of errors in the design followed by implementation and testing; (8 Lectures)

Text/Reference Books:
1. Bottaccini M.R, C.E. Merill, Instruments and Measurements, Bell and Howell
3. Wehr & Richards, Physics of the Atom, Addison, Wesley
5. Eugene Hecht & A.R. Ganesan (2009), Optics, Pearson

BS 10: Applied Physics II 2:0:0 [2]

Module 1: Solid State Physics covering, Free electron theory (qualitative), Fermi energy, Fermi-Dirac distribution function (with derivation), Kronig-Penny model (qualitative) – formation of allowed and forbidden energy bands, Concept of effective mass – electrons and holes, Density of states (qualitative), Electron scattering and resistance, magneto-resistance, Hall effect (with derivation); Semiconductors and insulators – direct & indirect band gaps, Fermi level for intrinsic (derivation) and extrinsic semiconductors (dependence on temperature and doping concentration). Diffusion and drift current (qualitative), Conductivity and photoconductivity, Optical response; Classification of different types of diode on the basis of doping concentration (rectifier diode, Zener diode, tunnel diode); Concept of optoelectronics, Light Emitting Diode (as direct band gap material), solar cell, avalanche and photodiode; (7 Lectures)

population of energy levels, Einstein A and B coefficients, Metastable state, population inversion, resonant cavity, excitation mechanisms, Lasing action; Properties of laser, characteristics of different types of laser; Types of laser - Solid State Laser: Nd–YAG, Gas Laser – He-Ne, Semiconductor Laser; Applications of Laser in Engineering – drilling, welding, micro machining, measurement of long distances, in CD write devices & printers, in Medicine as a surgical tool, in Nuclear fusion, Holography, Optical signal processing and Remote sensing of the atmosphere; Laser safety (9 Lectures)

Module 3: Introductory Quantum Mechanics covering, Concept of de Broglie’s Matter waves, derivation of wavelength of matter waves in different forms, Heisenberg’s Uncertainty principle, illustration- why an electron cannot exist in the nucleus; Concept of Phase velocity and Group velocity (qualitative); Concept of wave function Ψ and interpretation of |Ψ|^2; Schrödinger’s Time independent equation, Applications of Schrödinger’s equation (qualitative treatment) – a) Particle in one dimensional rigid box, b) Potential Barrier (emphasis on tunneling effect), tunnel diode, scanning-tunneling microscope c) Harmonic Oscillator, d) Hydrogen atom model (qualitative); Selection rules; Elements of linear vector spaces- The idea of n – dimensional vector space, use of ‘bra-ket’ notation, linear independence, basis, inner product, norm of a vector; Hilbert space, Ortho normality; Matrix representation of kets and linear operators; Pauli matrices; Definitions of Hermitian, Inverse and Unitary operators; Commutators; Tensor products; (7 Lectures)

Module 4: Thermal Physics covering, Concept of Heat: Lattice vibrations – Einstein (individual) and Debye (collective), Boltzmann’s distribution; Definition of temperature in terms of Boltzmann’s distribution; Concept of entropy, specific heat; Attaining low temperature by variation of parameter X (like pressure, magnetic field etc.) in two steps- isothermal increase of X followed by adiabatic decrease of X. Example: a) Liquifaction of gas with X = Pressure; b) Adiabatic demagnetization; Transfer of heat by conduction, convection and radiation - Conduction in a) solids, b) liquids, c) gases, d) interfaces; Convection - heat and mass transfer; Radiation - Stefan’s law (statement and equation); Thermal diffusivity; Applications like, Insulation- Glass Dewar/Thermos flask, Superinsulation Dewar, High temperature furnaces; Heat pipes; Heat sinks and Forced cooling/Radiators; Heat exchangers; Solar water heater; (7 Lectures)

Text/Reference Books:
1. Kittel C., Introduction to Solid State Physics, Wiley Eastern
2. Laud B.B., Lasers and Non-Linear Optics, New Age Publications
5. Guy K. White, Experimental Techniques in Low Temperature Physics, Oxford Science Publications
6. Dobson K., D. Grace& D. Lovett, Physics, Collins

BS 11: Applied Physics Laboratory I

Module 1: Choice of three experiments from, Lens aberration; Comparison of reflectivity from plane glass and AR coated glass at different angles of incidence and different wavelengths of visible, infrared, ultraviolet light; Use of diffraction grating as a wavelength selector; Use of polarized light to detect strain; Resolving Power of circular aperture (for different diameters) (3 Sessions)
Module 2: Choice of three experiments from, Experiment on photoconductivity; Measurement of sound pressure level; Determination of velocity of ultrasonic waves using ultrasonic interferometer; Measurement of compressibility of liquid using ultrasonic interferometer; Determination of wavelength using acoustic grating; (3 Sessions)

Module 3: Choice of four experiments from, Determination of Planck’s constant using photocell; Characteristics of photocell; Estimation of errors in temperature / resistance measurement using Wheatstone bridge; Measurement of white noise in the resistance as a function of temperature and calibration against known thermometer and thus use a resistor as secondary noise thermometer; Temperature dependence of characteristics of semiconductor laser; Laser beam profile – to find beam divergence; (4 Sessions)

BS 12: Applied Physics III  2:0:0  [2]

Module 1: Electromagnetic Theory and Dielectrics covering, Coulomb’s law for distribution of charges, Polarization Gauss’s law, Electric current and equation of continuity, Magnetic induction and Lorentz force, Steady current and Biot-Savert law, Ampere’s law, Magnetization and magnetic intensity, Faraday’s law of induction, Generalization of Ampere’s law, Maxwell’s equations; Introduction to dielectrics, Concept of Polarization; Dipole and dipole moment, Electric field due to dipole (without derivation); Depolarization field, depolarization factors, Local electric field at an atom, Lorentz field, Lorentz relation; Dielectric constant and polarizability – Clausius-Mossotti equation (with derivation); Types of polarization – electronic, ionic, dipolar, space charge; Temperature and frequency dependence of dielectric constant; (8 Lectures)

Module 2: Magnetism and Superconductivity covering, Magnetic field and Magnetization; Magnetic susceptibility, Paramagnetism - Paramagnetism due to partially filled shells, transition elements (3d), rare earths (4f) and actinides, Magnetization and total angular momentum (definition and relationship); Concept of magnetic moment, gyromagnetic ratio, Lande’s g-factor, Bohr Magneton, Curie’s Law – derivation for ‘spin only’ system (L = 0), expression for non-zero orbital angular momentum system (J = L + S); Ferromagnetism, antiferromagnetism, and ferrimagnetism; Exchange interaction between magnetic ions; Molecular field, Expression for Curie-Weiss law, concept of $\theta_P$; Ferromagnetism and Ferrimagnetism – Curie temperature, hysteresis, Hard ferromagnets, permanent magnets – SmCo5, Nd2Fe14B, Sintered Alnico, Sintered Ferrite – 3 etc. – Comparison and applications; Soft ferromagnets –Permalloys, Ferrites etc. – Comparison and applications; Neel temperature, Curie-Weiss law; Magnetic resonance, NMR and MRI, MASER; Superconductivity- Zero resistance, Critical temperature $T_c$; Perfect diamagnetism, Meissner effect, Critical field $H_C$, Type I and Type II superconductors, Cooper pairs and formation of superconducting gap at Fermi level, Electron-Phonon interaction and BCS theory, Isotope effect, Applications – Superconducting magnets, Transmission lines, Josephson effect (DC & AC, qualitative), SQUID; (7 Lectures)

Module 3: Physics of Nanomaterials with prerequisites of wave mechanics and introductory quantum mechanics covering, Introduction – Nanoscale; Properties of nanomaterials- Optical (SPR, luminescence, tuning band gap of semiconductor nanoparticles), Electrical (SET), Magnetic, Structural, Mechanical; Brief description of different methods of synthesis of nanomaterials (physical - laser ablation, ball milling; chemical - vapor deposition, sol gel); Reduction of dimensionality, Quantum wells (two dimensional), Quantum wires (one dimensional), Quantum dots (zero dimensional); Density of states and energy spectrum for Zero dimensional solid, One dimensional quantum wire, Two dimensional potential well, Particle in a
three dimensional box; Some special nanomaterials like, Aerogels – properties and applications, Carbon nanotubes - properties and applications, Core shell nanoparticles - properties and applications; Applications of nanomaterials: Electronics, Energy, Automobiles, Space, Medical, Textile, Cosmetics; Nanotechnology and Environment; (7 Lectures)

Module 4: Quantum Computation and Communication covering, the idea of ‘qubit’ and examples of single qubit logic gates- Classical bits, Qubit as a two level system; Bloch vector representation of state of qubit; Polarization states of photon and measurements; Pauli gates, Hadamard gate, Phase shift gate, Quantum gates as rotations in Bloch sphere; EPR paradox, concept of entanglement and Bell’s inequality- The paradox, joint state of entangled particles; Proof of Bell’s inequality; Two-qubit controlled gates; entanglement generation and the Bell basis- Generic two-qubit state, Controlled-NOT gate; Quantum circuit for transforming computational basis to Bell basis; Qualitative discussion on the ‘circuit’ model of ‘quantum computation; An overview of classical cryptography: Vernam cypher; Public key cryptosystem; The ‘Rivest-Shamir-Adleman’ or ‘RSA’ protocol; Comments on No-cloning theorem and impossibility of faster-than-light transfer of information; The BB84 protocol in quantum cryptography- The protocol; its validity on the basis of Heisenberg’s uncertainty principle; Quantum Teleportation- Basic idea; measurement using Bell operator, need for classical communication channel; quantum circuit describing teleportation protocol; (8 Lectures)

Text/Reference Books:
1. Kittel C., Introduction to Solid State Physics, Wiley Eastern
4. Charles P. Poole, Jr., Frank J. Owens, Introduction to Nanotechnology, Wiley Eastern

BS 13: Applied Physics Laboratory II

Module 1: Choice of ten experiments from, Determination of dielectric constant using ac or dc fields; Experiment on piezoelectricity – detection / determination of expansion on application of electric field; Ferroelectric hysteresis; Holography – Recording and reconstruction of hologram; Spectral analysis of He-Ne discharge tube; Newton’s Ring; Measurement of capacitance of different dielectric materials; Hall Effect and determination of Hall coefficient; Determination of energy band gap of semiconductor (diode/thermistor); Characteristics of solar cell at different intensities and determination of maximum workable power; Thermal conductivity of Al and SS (rods) –relative study; Thermal diffusivity of Al and SS (rods); Newton’s cooling law for Al rod and Al sheet with same mass; Thermal conductivity of insulator by Lee’s disc method; Relative thermal resistance of interface between two Aluminum plates by varying (i) surface roughness (ii) with and without conducting paste; Measurement of Magneto-resistance of semiconductors; (10 Sessions)

(iii) Chemistry

The purpose of these courses is to emphasize the relevance of fundamentals and applications of chemical sciences in the field of engineering. Thus, the courses have been conceived in such a way that they take into account appropriate combinations of old and new emerging concepts in the
chemical sciences area and their current and potential uses in engineering. The Courses attempt to address the principles of general chemistry and specific topics relevant to various engineering disciplines, wherein the students can apply this learning in their respective areas of expertise. The modular courses (8 credits, in all) have been split into two courses, the first one giving the concepts in general chemistry followed by laboratory experiments, designed to give hands on experience of various analytical techniques and associated calculations. In the second course, the focus is more on the application of the basic concepts with introduction of some advanced concepts in the area of chemical sciences relevant to engineering.

BS 14: Chemistry I

**Module 1: Water** covering, Types of hardness- Units, Determination of hardness by EDTA method, Alkalinity of water and its significance, Numerical problems. Softening methods and Numerical problems based on these methods; Membrane-based processes; Problems with Boiler feed water and its treatments, Specifications for drinking water (BIS and WHO standards), Chlorination of Water; Sources and quality of drinking water, concept of water drainage systems; Concept of water harvesting, storage and recycling; Nature and uses of sludge obtained on treatment of municipal and industrial effluent water, role of a-forestation for water recycling; Toxicity of water; Sources of water pollutants, water pollution through analytical laboratories in schools, colleges and universities, measures for minimization and recycling of laboratory waste water. *(10 Lectures)*

**Module 2: Polymers & Composites** covering, Basics of Polymer Chemistry, Molecular weight, Molecular shape, Crystallinity, Glass transition temperature and melting point, Visco-elasticity, Structure-property relationship; Methods of polymerization, Thermoplastics and Thermo-sets, Copolymerization, Elastomers-Structure, Applications, curing techniques; Advanced polymeric materials; Conducting polymers, Liquid crystal properties. Dendrimers and their difference from polymers, degradable polymer materials, solubility of polymeric & dendrimeric molecules, physicochemical properties of polymers; Fabrication of polymers-Compression/Injection/Extrusion moulding. Synthesis, Properties and Uses of PE, PVC, PMMA, Formaldehyde resins; Melamine-formaldehyde-urea resins, adhesives and their adhesive mechanism; Composites- Basics of composites, Composition and Characteristic properties of composites; Types of Composites-Particle, Fibre, Reinforced, Structural, & their applications; Metallic and non-metallic fillers, molecular and oligomerization mechanism, nano-composites. *(10 Lectures)*

**Module 3: Surfactants and Lubricants** covering, Surface active agents- Methods of preparation of soap, Cleaning mechanism, Types and advantages of detergents; Critical miceller concentration, hydrophilic and hydrophilic interactions. Frictionality of surfactant solutions, HLB values; Lubricants- Concept of tribology; Types of lubricants and Mechanism of lubrication, Physical and Chemical properties of lubricants, Additives of lubricants, Selection of lubricants, freezing points of lubricants. *(6 Lectures)*

**Module 4: Biotechnology** covering, Significance and application of Biotechnology, Bio-reactors, Biotechnological processes; Fermentation, Production of Alcohol, Production of Vitamins; Industrial enzymes, Bio-fuels, Biosensors, Bio-fertilizers, Bio-surfactants; Applications of Biochips; Intra-molecular multiple force theory (IMMFT) of Bio-surfactants. *(6 Lectures)*

**Module 5: Green Chemistry** covering, Introduction, Significance and latest research in this field; Various Industrial applications of green chemistry; Green technology- Latest green laboratory
technology for saving experimental resources and infrastructural framework; R4M4 (Reduce, Reuse, Recycle, Redesign; Multipurpose, Multidimensional, Multitasking, Multi-tracking;) model with special reference of survismeter, econoburette; Safer Technique for Sustainable Sodium Extract Preparation for Extra Elements Detection; Concept of molecular and atomic economy & its use in green chemistry; Life cycle analysis technique (cradle to grave approach) (6 Lectures)

Module 6: Instrumental Techniques covering, Fundamentals of Spectroscopy; Principles and applications of UV-visible, IR & Atomic absorption Spectroscopy; Flame photometry; Principles and applications of chromatographic techniques including Gas, Column, HPLC. NMR & DSC working.(7 Lectures)

Text/Reference Books:

BS 15: Chemistry Laboratory I

Module 1: Choice of ten experiments from, Total Hardness of Water; Determination of carbonate and non carbonate hardness of water sample; Determination of Alkalinity of water sample; Chloride Content in Water; Residual Chlorine in Tap water; Method of removal of hardness of water using ion exchange column; Saponification Value of an Oil; Acid value of an Oil; Viscosity Index and surface tension determination together; Flash Point by Abel’s Apparatus; Flash Point by Pensky-Marten’s Apparatus; Determination of Viscosity of polymer solution using survismeter; Demonstration of TLC / Paper chromatograph. (10 Sessions)

Module 2: Experiments to be demonstrated: Green Tech titration for experimental resource saving in analytical lab using econoburette, semi micro technique based measurement; Determination of water binding capacity of few toxic metal salts, dyes and carcinogenic compounds like pyridine and benzene using survismeter; Determination of friccohesity of oil samples with Survismeter; Comparative water binding capacity of Bovine serum albumin protein, NaCl salt and glucose as carbohydrate molecules with survismeter protein denoturation – precipitation; Friccohesity determination of band locations of glycine, α-alanine and β-alanine in aqueous mixture; Green Tech method of viscosity & surface tension measurements together with survismeter; Determination of viscosity and surface tension together of polymer solution using survismeter; Determination of wetting coefficient and contact angle measurement of soap and detergent using survismeter; Viscosity average molecular weight and shape determination using survismeter; Determination of mutual mixing & emulsion quality of oil and water liquid-liquid-interfaces (LLI) with survismeter; Potentionmetric Titration/Redox potential

BS 16: Chemistry II

3:0:0 [3]
Module 1: Electrochemistry covering, Conductance, Cell constant and its determination; Single electrode potentials, Electrolytic and Galvanic cells, EMF series, Nernst equation, Cell emf measurement, Reversible and irreversible cells; Thermodynamic overview of electrochemical processes. (6 Lectures)

Module 2: Corrosion covering, Definition and scope of corrosion, Direct chemical corrosion, Electrochemical corrosion and its mechanisms; Types of electrochemical corrosion, (differential aeration, galvanic, concentration cell); Typical Electrochemical corrosion like Pitting, Intergranular, Soil, Waterline; Factors affecting corrosion, Protection of corrosion, Applications with few practical problems of corrosion; Permeability of oxygen to patch forming materials, scaling of iron materials. (8 Lectures)

Module 3: Energy Sciences covering, Fuels [Conventional] – Types of fuels, Calorific value, Determination of Calorific value, Numerical problems based on it; Analysis of coal, Refining of Petroleum, Liquid fuels, Fuels for IC engines, Knocking and anti-knock agents, Octane and Cetane values, Cracking of oils; Calorie value of semisolids fuels; Alternative sources of Energy – Limitations of fossil fuels, Non-conventional sources of energy- Solar, Wind, Geo, Hydro power and biomass; Advantages and disadvantages; Nuclear Energy production from nuclear reactions, Nuclear reactor, Nuclear fuel cycles, Nuclear waste disposal; Safety measures of Nuclear reactors; Battery technology – Fundamentals of primary cells, Rechargeable batteries, Ni-Cd, Ni-metal hydride, Li-ion batteries; Fuel cells- principles, applications, advantages/disadvantages; Stable current supply & life of battery. (10 Lectures)

Module 4: Nanomaterials covering, Introduction, Fullerenes, Carbon nanotubes, Nanowires; Electronic and mechanical properties; Synthesis of nanomaterials; Topdown & bottom up approach; Applications of nanomaterials–Catalysis, Electronics & Telecommunication, Medicines, Composites, Energy sciences; Fundamentals of nanomaterials. (6 Lectures)

Module 5: Environmental Chemistry covering, Air pollution; Noise pollution, optimum decibel levels; Water pollution; Determination and Significance of COD and BOD; TOC Numerical problems; Solid waste treatment and collection of NKP; Green house effect and Global warming; e-Waste and Radioactive pollution; Role of electromagnetic radiation in global warming. (10 Lectures)

Module 6: Metals & Alloys covering, Phase Rule, phase rule applications to one and multiple component systems; Iron-Carbon phase equilibrium diagram; Types of Alloys- ferrous and nonferrous alloys, Carbon steel, Alloy steel, Alloys of Cu, Al, Pb. (5 Lectures)

Text/Reference Books:

(iv) Biology
Biology is the scientific exploration of the vast and diverse world of living organisms; an exploration that has expanded enormously within the last four decades revealing a wealth of knowledge about ourselves and about the millions of other organisms with whom we share this planet Earth. The study of biology has an immediate relevance to our daily lives. It is important for everyone to develop an informed sense of how we may individually and collectively continue to fit into the complex ecology of our planet without rendering horrendous destruction. Some of the greatest engineering feats of the future are likely to involve bioengineering projects, particularly concerning the disposal of municipal and industrial wastes and the development of renewable resources. The Engineering students by studying Biology - both at elementary and advanced levels will get exposure to the functions and interactions of biological systems from qualitative and quantitative perspective. This syllabus is a part of the quest to help future generation Engineers apply engineering knowledge for achieving sustainable future. This syllabus is a part of the quest to help future generation engineers apply engineering knowledge for achieving a sustainable future.

BS I7: Elementary Biology

Module 1A: Concepts in Biology covering, Chemical foundations and basic chemistry of cell- Carbon compounds and cell as a unit of life; Physical and chemical principles involved in maintenance of life processes; Scientific methods- Microscopy (principles and applications); (3 Lectures)

Module 1B: Cell structure and functions covering, Ultra-structure and functions of cellular components- Prokaryotic and Eukaryotic cells, cell wall, plasma membrane, endoplasmic reticulum; Biomolecules- Carbohydrates, Lipids, Amino Acids, Proteins, Nucleic acids; Tissue systems- Overview of animal and plant tissue systems; (3 Lectures)

Module 2A: Metabolisms covering Bio-membranes, diffusion, absorption, osmo-regulation; Photosynthesis and respiration; (3 Lectures)

Module 2B: Chromosomes and Cell Divisions covering, Morphology of chromosomes; Cell theory- Cell cycle and phases; Mitosis and meiosis; (4 Lectures)

Module 3A: Genetics covering, Laws of heredity- Biological indicators, bio-censors; Mutations-Cause, types and effects on species; (3 Lectures)

Module 3B: Organic Evolution covering, Origin of life- Haldane and Oparins concepts; Modern concept of natural selection and speciation- Lamarkism, Darwinism/Neo-Darwinism; (4 Lectures)

Module 4: Plant and Animal Classification covering, Plant classification: Bentham and Hooker’s classification with examples of economically important plants; Animal classification- Linnaean hierarchy of animal kingdom; (3 Lectures)

Module 5: Laboratory Sessions covering, Laboratory safety and scientific measurements (metric); Structure and function of simple compound microscope; Study of unicellular organisms - gram staining for bacteria, cell structure of Paramoecium, Anaebena or Nostoc; Demonstration &Practical: Study of photosynthesis (using Hydrilla) and respiration (with germinating seeds), Cyclosis in Dicotyledonous leaf; Study of Mitosis using Onion or Garlic root-tip; Study of
Karyotypes of normal and abnormal human cells, study of syndromes (Down’s syndrome, Turner’s syndrome); Demonstration/ Instructor’s choice- Natural Selection Survivorship using ‘forest’ as a model; Metabolism- Study of diffusion and osmosis using plant samples; Plant classification- 10 locally available species (with an option of Field Visit to a Botanical Garden); Animal classification using 10 species; (15 Sessions)

BS I8: Advanced Biology I

1:0:2 [2]

Module 1A: Introduction to Microbiology covering, Microbial diversity: Prokaryotes, Eukaryotes, Archaebacteria; Impact of micro-organisms: Impact on industry, agriculture and health; (4 Lectures)

Module 1B: Industrial Microbiology covering, Primary and secondary screening of microorganisms, fermentation processes, bioreactors; Microbial Ecology- Principals of microbial ecology, Microbial bio-remediation; Medical Microbiology: Microbial diseases (air-borne, food-borne, sexually transmitted diseases), epidemiology and public health; (4 Lectures)

Module 2A: Animal Physiology covering, Nutrition and digestion; Excretion and circulation; (3 Lectures)

Module 2B: Reproductive Biology covering, Reproduction: Asexual and sexual reproduction; Human reproductive system: An overview; Embryonic development, Assisted Reproductive Technology (ART); (3 Lectures)

Module 3A: Immunology covering, Human immune mechanism- Types of immunities; Antigen/Antibody reactions- Applications in human health; Immunological disorders: Autoimmune diseases; (3 Lectures)

Module 3B: Biochemistry covering, Amino acids & Proteins- Classification based on function and structure; Protein synthesis- Components and regulatory mechanisms; Enzymes- An overview; (3 Lectures)

Module 4: Biological Techniques covering, Separation of organelles- Centrifugation; Separation of macromolecules- Chromatography, electrophoresis; Colourimetry; (3 Lectures)

Module 5: Laboratory & Field Work Sessions covering, Streak plating, Spread plate and bulk seed of micro-organisms- determination of viable count; Wine making experiment from fruit source; Dissection of digestive system of an animal (cockroach or earthworm); Amylase estimation from different organisms; Institutional visit to Assisted Reproductive Technology (ART) Facility (any Hospital); Total RBC, WBC count and Platelet count/ Determination of Blood Group; Determination of KM value of Amylase and to study effect of temperature and pH on the same; Thin Layer Chromatography to separate plant pigments; Circular Paper Chromatography to separate sugars; Separation of Proteins by Gel Electrophoresis (15 Sessions)

BS I9: Advanced Biology II

1:0:2 [2]

Module 1A: Plant Physiology covering, Transpiration; Mineral nutrition (3 Lectures)
Module 1B: Ecology covering, Ecosystems- Components, types, flow of matter and energy in an ecosystem; Community ecology- Characteristics, frequency, life forms, and biological spectrum; Ecosystem structure- Biotic and a-biotic factors, food chain, food web, ecological pyramids; (3 Lectures)

Module 2A: Population Dynamics covering, Population ecology- Population characteristics, ecotypes; Population genetics- Concept of gene pool and genetic diversity in populations, polymorphism and heterogeneity; (3 Lectures)

Module 2B: Environmental Management covering, Principles: Perspectives, concerns and management strategies; Policies and legal aspects- Environment Protection Acts and modification, International Treaties; Environmental Impact Assessment- Case studies (International Airport, thermal power plant); (3 Lectures)

Module 3A: Molecular Genetics covering, Structures of DNA and RNA; Concept of Gene, Gene regulation, e.g., Operon concept; (3 Lectures)

Module 3B: Biotechnology covering, Basic concepts: Totipotency and Cell manipulation; Plant & Animal tissue culture- Methods and uses in agriculture, medicine and health; Recombinant DNA Technology- Techniques and applications; (3 Lectures)

Module 4A: Biostatistics covering, Introduction to Biostatistics:-Terms used, types of data; Measures of Central Tendencies- Mean, Median, Mode, Normal and Skewed distributions; Analysis of Data- Hypothesis testing and ANNOVA (single factor) (4 Lectures)

Module 5: Laboratory & Fieldwork Sessions covering, Comparison of stomatal index in different plants; Study of mineral crystals in plants; Determination of diversity indices in plant communities; To construct ecological pyramids of population sizes in an ecosystem; Determination of Importance Value Index of a species in a plant community; Seminar (with PPTs) on EIA of a Mega-Project (e.g., Airport, Thermal/Nuclear Power Plant/ Oil spill scenario); Preparation and extraction of genomic DNA and determination of yield by UV absorbance; Isolation of Plasmid DNA and its separation by Gel Electrophoresis; Data analysis using Bio-statistical tools; (15 Sessions)

(c) ENGINEERING SCIENCES

ES 01: Engineering Graphics 2:2:0 [3]

42
The objective of this Course is to provide the basic knowledge about Engineering Drawing. Detailed concepts are given in projections, technical drawing, dimensioning and specifications, so useful for a student in preparing for an engineering career.

Module 1: Introduction to Engineering Drawing covering, Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales;

Module 2: Orthographic Projections covering, Principles of Orthographic Projections- Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes;

Module 3: Projections of Regular Solids covering, those inclined to both the Planes- Auxiliary Views;

Module 4: Sections and Sectional Views of Right Angular Solids covering, Prism, Cylinder, Pyramid, Cone – Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

Module 5: Isometric Projections covering, Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions;

Text/Reference Books:

ES 02: Engineering Workshop

The objective of this practical Course is to provide the basic concepts about tools used in an Engineering Workshop. Detailed concepts are proposed in all the major trades of current interest. It is expected that at least 6 experiments need to be conducted from each of the Modules, as listed below.

Module 1: Mechanical Engineering covering, the following trades for experiments (with a minimum of two exercises under each trade) - Carpentry, Fitting, Tin-Smithy and Development of jobs carried out and soldering, Black Smithy, House Wiring, Foundry (Moulding only), Plumbing; (6 Sessions)

Module 2: Mechanical Engineering covering, the following trades for demonstration for exposure - Power tools in Construction, Wood working, Electrical and Mechanical Engineering practices; (2 Sessions)

Module 3: Information Technology covering, Hardware Experiments- Task 1: Identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral; Task 2: Disassemble and assemble the PC
back to working condition; Task 3: Install MS windows and Linux on the personal computer and configure to dual boot the system; Task 4: Troubleshooting: Students to be given a PC which does not boot due to improper assembly or defective peripherals and system software problems. To identify the problem and fix it to get the PC back to working condition; Software Experiments- Task 5: Students to get connected to their Local Area Network and access the Internet. In the process to configure the TCP/IP setting, access the websites and email; Task 6: Productivity Tools- Use Office Tools Word, Excel for creating Scheduler, Calculating GPA, basic Power Point utilities and tools which help to create basic Power Point Presentation as well as interactive Presentation using Hyperlinks, Inserting –Images, Clip Art, Audio, Video, Objects, Tables and Charts; (7 Sessions)

Text/Reference Books:
4. Gupta, Vikas (2010), Comdex Information Technology Course Tool Kit - WILEY Dreamtech

ES 03: Materials Science

Module 1: Crystal Structure covering, Atomic structure and inter-atomic bonding; Structure of crystalline solids; Lattices, unit cells; Crystal systems, Bravais lattices; Indexing of directions and planes, notations, Inter-planar spacings and angles, co-ordination number, packing factors;

Module 2: Defects in Crystals covering, Point defects; Dislocations, Types of dislocations, Burgers vector and its representation; Planar defects, stacking faults, twins, grain boundaries;

Module 4: Mechanical Properties of Materials covering, Concepts of stress and strain, Stress-Strain diagrams; Properties obtained from the Tensile test; Elastic deformation, Plastic deformation. Impact Properties, Strain rate effects and Impact behaviour. Hardness of materials;

Module 5: Magnetic Materials covering, Introduction, Magnetic fields or quantities, types of magnetism, classification of magnetic materials, soft magnetic materials, H magnetic materials, Ferrites, Ferro, Para Magnetic materials; Nano Materials covering, Introduction – Nano material preparation, purification, sintering nano particles of Alumina and Zirconia, Silicon carbide, nano-op, nano-magnetic, nano-electronic, and other important nano materials;

Text/Reference Books:
The objective of this Course is to provide an introductory treatment of *Engineering Mechanics* to all the students of engineering, with a view to prepare a good foundation for taking up advanced courses in the area in the subsequent semesters.

**Module 2: Friction** covering, Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack;

**Module 3: Centroid and Centre of Gravity** covering, Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook;

**Module 4: Introduction to Dynamics** covering, Basic terms, general principles in dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D’Alembert’s principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation;

**Module 5: Mechanical Vibrations** covering, Basic terminology, free and forced vibrations, resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums;

**Text/Reference Books:**

The objective of this Course is to provide the students with an introductory and broad treatment of the field of *Electrical Engineering*.

**Module 1: D. C. Circuits** covering, Ohm's Law and Kirchhoff’s Laws; Analysis of series, parallel and series-parallel circuits excited by independent voltage sources; Power and energy; *Electromagnetism* covering, Faradays Laws, Lenz's Law, Fleming's Rules, Statically and
dynamically induced EMF; Concepts of self inductance, mutual inductance and coefficient of coupling; Energy stored in magnetic fields;

*Module 2: Single Phase A.C. Circuits covering*, Generation of sinusoidal voltage- definition of average value, root mean square value, form factor and peak factor of sinusoidal voltage and current and phasor representation of alternating quantities; Analysis with phasor diagrams of R, L, C, RL, RC and RLC circuits; Real power, reactive power, apparent power and power factor, series, parallel and series-parallel circuits; *Three Phase A.C. Circuits* covering, Necessity and Advantages of three phase systems, Generation of three phase power, definition of Phase sequence, balanced supply and balanced load; Relationship between line and phase values of balanced star and delta connections; Power in balanced three phase circuits, measurement of power by two wattmeter method;

*Module 3: Transformers* covering, Principle of operation and construction of single phase transformers (core and shell types). EMF equation, losses, efficiency and voltage regulation; *Synchronous Generators* covering, Principle of operation; Types and constructional features; EMF equation;

*Module 4: DC Machines* covering, Working principle of DC machine as a generator and a motor; Types and constructional features; EMF equation of generator, relation between EMF induced and terminal voltage enumerating the brush drop and drop due to armature reaction; DC motor working principle; Back EMF and its significance, torque equation; Types of D.C. motors, characteristics and applications; Necessity of a starter for DC motor;

*Module 5: Three Phase Induction Motors* covering; Concept of rotating magnetic field; Principle of operation, types and constructional features; Slip and its significance; Applications of squirrel cage and slip ring motors; Necessity of a starter, star-delta starter.

*Module 6: Sources of Electrical Power* covering, Introduction to Wind, Solar, Fuel cell, Tidal, Geo-thermal, Hydroelectric, Thermal-steam, diesel, gas, nuclear power plants; Concept of cogeneration, and distributed generation;

**Text/Reference Books:**

4. Rajendra Prasad (2009), Fundamentals of Electrical Engineering, Prentice Hall, India
5. Hughes, E. 2005), Electrical Technology, Pearson
6. Parker Smith (2003), Problems in Electrical Engineering, CBS Publishers
7. Van Valkenburg Network Analysis, Prentice Hall, India

**ES 06: Basic Electrical Engineering Laboratory 0:0:2 [1]**

*Module 1: Laboratory Sessions* covering, General introduction to Electrical Engineering Laboratory, experimental set-ups, instruments etc; Introduction to domestic wiring, service mains, meter board and distribution board; Wiring of two-way and three-way switching of lamp; Use of Fuse and Miniature Circuit breaker; Electric Shocks and precautions against shocks; Basic methods of Earthing; Verification of Kirchhoff’s Voltage Law and Kirchhoff’s Current Law; Serial and Parallel resonance- Tuning, Resonant frequency, Bandwidth and Q factor determination for RLC network; Measurement of active and reactive power in balanced 3-phase circuit using two-watt meter method; Polarity and Ratio Test for single Phase Transformer; Predetermination of
efficiency and regulation by Open Circuit and Short circuit tests on single-phase transformer; Speed control of Induction Motor using rotor resistance; (15 Sessions)

Text/Reference Books:
1. Tarnekar, S.G. A Textbook of Laboratory Course in Electrical Engineering S Chand Publications

ES 07: Basic Electronics Engineering 3:0:0 [3]

The objective of this Course is to provide the students with an introductory and broad treatment of the field of Electronics Engineering.

Module 1: Diodes and Applications covering, Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Switch, Diode as a Rectifier, Half Wave and Full Wave Rectifiers with and without Filters; Breakdown Mechanisms, Zener Diode – Operation and Applications; Opto-Electronic Devices – LEDs, Photo Diode and Applications; Silicon Controlled Rectifier (SCR) – Operation, Construction, Characteristics, Ratings, Applications;

Module 2: Transistor Characteristics covering, Bipolar Junction Transistor (BJT) – Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Voltage Divider Bias Configuration; Field Effect Transistor (FET) – Construction, Characteristics of Junction FET, Depletion and Enhancement type Metal Oxide Semiconductor (MOS) FETs, Introduction to CMOS circuits;

Module 3: Transistor Amplifiers and Oscillators covering, Classification, Small Signal Amplifiers – Basic Features, Common Emitter Amplifier, Coupling and Bypass Capacitors, Distortion, AC Equivalent Circuit; Feedback Amplifiers – Principle, Advantages of Negative Feedback, Topologies, Current Series and Voltage Series Feedback Amplifiers; Oscillators – Classification, RC Phase Shift, Wien Bridge, High Frequency LC and Non-Sinusoidal type Oscillators;

Module 4: Operational Amplifiers and Applications covering, Introduction to Op-Amp, Differential Amplifier Configurations, CMRR, PSRR, Slew Rate; Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal OpAmp, Concept of Virtual Ground; Op-Amp Applications - Inverting, Non-Inverting, Summing and Difference Amplifiers, Voltage Follower, Comparator, Differentiator, Integrator;

Module 5: Timers and Data Converters covering, IC 555 Timer – Block Diagram, Astable and Monostable Multivibrator Configurations; Data Converters – Basic Principle of Analogue-to-Digital (ADC) and Digital-to-Analogue (DAC) Conversion, Flash type, Counter-ramp type and Successive Approximation type ADCs, Resistor Ladder Type DAC, Specifications of ADC and DAC;

Module 6: Basic Digital Electronics covering, Binary Number Systems and Codes; Basic Logic Gates and Truth Tables, Boolean Algebra, De Morgan’s Theorems, Logic Circuits, Flip-Flops – SR, JK, D type, Clocked and Master-Slave Configurations; Counters – Asynchronous, Synchronous, Ripple, Non-Binary, BCD Decade types; Shift Registers – Right-Shift, Left-Shift, Serial-In-Serial-Out and Serial-In-Parallel-Out Shift Registers; Applications;

Text/Reference Books:
ES 08: Basic Electronics Engineering Laboratory  

**Module 1:** Laboratory Sessions covering, Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Switches (SPDT, DPDT and DIP), Bread Boards and Printed Circuit Boards (PCBs); Identification, Specifications, Testing of Active Devices – Diodes, BJTs, JFETs, MOSFETs, Power Transistors, SCRs and LEDs;

**Module 2:** Study and Operation of Digital Multi Meter, Function / Signal Generator, Regulated Power Supply (RPS), Cathode Ray Oscilloscopes; Amplitude, Phase and Frequency of Sinusoidal Signals using Lissajous Patterns on CRO (CRO);

**Module 3:** Experimental Verification of PN Junction Diode Characteristics in A) Forward Bias B) Reverse Bias, Zener Diode Characteristics and Zener Diode as Voltage Regulator, Input and Output Characteristics of BJT in Common Emitter (CE) Configuration, Drain and Transfer Characteristics of JFET in Common Source (CS) Configuration;

**Module 4:** Study of Half Wave and Full Wave Rectification, Regulation with Filters, Gain and Bandwidth of BJT Common Emitter (CE) Amplifier, Gain and Bandwidth of JFET Common Source (CS) Amplifier, Gain and Bandwidth of BJT Current Series and Voltage Series Feedback Amplifiers, Oscillation Frequency of BJT based RC Phase Shift, Hartley and Colpitts Oscillators;

**Module 5:** Op-Amp Applications – Adder, Subtractor, Voltage Follower and Comparator; Op-Amp Applications – Differentiator and Integrator, Square Wave and Triangular Wave Generation, Applications of 555 Timer – Astable and Monostable Multivibrators;

**Module 6:** Truth Tables and Functionality of Logic Gates – NOT, OR, AND, NOR, NAND, XOR and XNOR Integrated Circuits (ICs); Truth Tables and Functionality of Flip-Flops – SR, JK and D Flip-Flop ICs; Serial-In-Serial-Out and Serial-In-Parallel-Out Shift operations using 4-bit/8-bit Shift Register ICs; Functionality of Up-Down / Decade Counter ICs; (15 Sessions)

**Text/Reference Books:**

2. Thomas L. Floyd and R. P. Jain (2009), *Digital Fundamentals* by Pearson Education,

ES 09: Computer Programming  

**Module 1:** Introduction covering, Introduction to computer organization; Evolution of Operating Systems; Machine languages, Assembly Languages and High Level Languages; Key Software and Hardware Trends, Procedural & Object Oriented Programming Methodologies; Program Development in C, Structured Programming - Algorithm, Pseudo-code; The C Standard Library, Data types in C, Arithmetic operators, Control Structures – If-else, While, for, do-while, Switch, break and continue statements; Formatted input-output for printing Integers, floating point numbers, characters and strings; Simple C Programming examples;
Module 2: Designing Structured Programs in C covering, Top Down Design and Stepwise refinement; Program Modules in C, Math Library Functions, Function Definition, Prototypes; Header files, Parameter passing in C, Call by Value and Call by Reference; Standard functions, Recursive functions, Preprocessor commands, Example C programs; Scope, Storage classes; Arrays covering, Declaring arrays in C, Passing arrays to functions, Array applications, Two – dimensional arrays, Multidimensional arrays, C program examples;

Module 3: Pointers in C covering, Pointer variable declaration and Initialization. Pointer operators, Pointer expressions and Arithmetic, Relationship between pointers and arrays; Strings including Concepts, String Conversion functions, C Strings, String Manipulation Functions and String Handling Library;

Module 4: Derived types covering, Structures – Declaration, definition and initialization of structures, accessing structures, structures in functions, self referential structures, unions; Data Structures including Introduction to Data Structures, Stacks, Queues, Trees, representation using arrays, Insertion and deletion operations;

Module 5: Dynamic Memory Allocation covering Linked List Implementation, Insertion, Deletion and Searching operations on linear list; Searching and Sorting – Sorting- selection sort, bubble sort, insertion sort, quick sort, merge sort, Searching-linear and binary search methods;

Text/Reference Books:
1. Dietel & Dietel (2000), C – How to Program, Pearson Education
2. Ellis Horowitz, Sartaj Sahni, Susan Anderson (1993), Fundamentals of Data Structures in C, Prentice Hall of India

ES10: Computer Programming Laboratory

Laboratory Sessions covering the following exercises:

Module 1: To write a C program in each case, to find the sum of individual digits of a positive integer, generate the first n terms of the Fibonacci sequence and generate all the prime numbers between 1 and n, where n is a value supplied by the user; to calculate the Sum =\(1-x^2/2!+x^4/4!-x^6/6!+x^8/8!-x^{10}/10!\);

Module 2: To write C programs that use both recursive and non-recursive functions, To find the factorial of a given integer and To find the GCD (greatest common divisor) of two given integers; Also, to write a C program, which takes two integer operands and one operator from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, % and use Switch Statement) and to write a C program that uses functions to perform the Addition of Two Matrices and Multiplication of Two Matrices;

Module 3: To write a C program that uses functions to perform the operations: To insert a sub-string in to a given main string from a given position; To delete n Characters from a given position in a given string; To write a C program to determine if the given string is a palindrome or not; Also to write a C program that displays the position or index in the string \(S\) where the string \(T\) begins,
or – 1 if S doesn’t contain T; To write a C program to count the lines, words and characters in a given text.

Module 4: To write a C program to generate Pascal’s triangle and also to construct a pyramid of numbers; Also to write a C program that uses functions to perform the following operations on singly linked list: Creation, Insertion, Deletion, Traversal;

Module 5: To write C programs that implements stack (its operations) using Arrays, Pointers and that implements Queue (its operations) using Arrays, Pointers;

Module 6: To write a C program that implements the following sorting methods to sort a given list of integers in ascending order using - Bubble sort, Selection sort; Also, to write C programs that use both recursive and non-recursive functions to perform the following searching operations for a Key value in a given list of integers- Linear search, Binary search;

Module 7: To write a C program that implements the following sorting method to sort a given list of integers in ascending order - Quick sort; Also to write a C program that implements the following sorting method to sort a given list of integers in ascending order - Merge sort;

Text/Reference Books:
1. Dietel & Dietel (2000), C – How to Program, Pearson Education
2. R. J. Dromey (1991), How to solve it by Computer, Prentice-Hall, India.

ES 11: Basic Simulation Laboratory (Simulation Lab. Experiments may be carried out using MATLAB)

Module 1: Creating a One-Dimensional Array (Row / Column Vector) Exercise – Creating a vector of even whole numbers between 31 and 75; Creating a Two-Dimensional Array (Matrix of given size) and (A). Performing Arithmetic Operations - Addition, Subtraction, Multiplication and Exponentiation. (B). Obtaining Modified Matrix - Inverse, Transpose, with Appended and Deleted Elements;

Module 2: Performing Matrix Manipulations - Concatenating, Indexing, Sorting, Shifting, Reshaping, Resizing and Flipping about a Vertical Axis / Horizontal Axis; Creating Arrays X & Y of given size (1 x N) and Performing
   (A). Relational Operations - >, <, ==, <=, >=, ~=
   (B). Logical Operations - ~, &, |, XOR

Module 3: Generating a set of Commands on a given Vector (Example: X = [1 8 3 9 0 1]) to
   (A). Add up the values of the elements (Check with sum)
   (B). Compute the Running Sum (Check with sum), where Running Sum for element j = the sum of the elements from 1 to j, inclusive.
   (C). Compute the Sine of the given X-values (should be a vector).
   Also, Generating a Random Sequence using rand() / randn() functions and plotting them.

Module 4: Evaluating a given expression and rounding it to the nearest integer value using Round, Floor, Ceil and Fix functions; Also, generating and Plots of
Trigonometric Functions - \(sin(t), cos(t), tan(t), sec(t), \text{cosec}(t) \) and \(cot(t)\) for a given duration ‘\(t\)’. (B). Logarithmic and other Functions – \(log(A), log_{10}(A)\), Square root of A, Real \(n^{th}\) root of A.

Module 5: Creating a vector X with elements, \(X_n = (-1)^{n+1}/(2n-1)\) and Adding up 100 elements of the vector, X; And, plotting the functions, \(x, x^2, e^x \) and \(exp(x^2)\) over the interval \(0 < x < 4\) (by choosing appropriate mesh values for \(x\) to obtain smooth curves), on (A). A Rectangular Plot (B). A Semi log Plot (C). A log-log Plot

Module 6: Generating a Sinusoidal Signal of a given frequency (say, 100Hz) and Plotting with Graphical Enhancements - Titling, Labelling, Adding Text, Adding Legends, Adding New Plots to Existing Plot, Printing Text in Greek Letters, Plotting as Multiple and Sub-Plots; Also, Making Non-Choppy and Smooth Plot of the functions,
\[ f(x) = sin(1/x) \text{ for } 0.01 < x < 0.1 \text{ and } g(x) = (\sin x)/x. \]

Module 7: Creating A Structure, An Array of Structures and Writing Commands to Access Elements of the created Structure and Array of Structures; Also, Solving First Order Ordinary Differential Equation using Built-in Functions; And, Creating an \(M \times N\) Array of Random Numbers using \texttt{rand} and setting any value that is < 0.2 to ‘0’ and any value that is \(\geq 0.2\) to ‘1’ by moving through the Array, Element by Element;

Module 8: Generating normal and integer random numbers (1-D & 2-D) and plotting them; Also, Writing a Script (which keeps running until no number is provided to convert) that asks for Temperature in degrees Fahrenheit and Computes the Equivalent Temperature in degrees Celsius. [Hint: Function \texttt{is empty} is useful]

Module 9: Writing brief Scripts starting each Script with a request for input (using \texttt{input}) to Evaluate the function \(h(T)\) using if-else statement, where
\[
    h(T) = \begin{cases} 
    (T - 10) & \text{for } 0 < T < 100 \\
    (0.45 T + 900) & \text{for } T > 100. 
    \end{cases}
\]
Exercise : Testing the Scripts written using A). \(T = 5, h = -5\) and B). \(T = 110, h = 949.5\)
Also, Creating a Graphical User Interface (GUI); And, Curve Fitting using (A) Straight line Fit (B). Least Squares Fit

Module 10: Interpolation based on following Schemes (A). Linear (B). Cubic (C). Spline Also, Generating the first Ten Fibonacci numbers according to the relation \(F_n = F_{n-1} + F_{n-2}\) with \(F_0 = F_1 = 1\), and Computing the ratio \(F_n / F_{n-1}\) for the first 50 Fibonacci numbers.
[Exercise: Verifying that the computed ratio approaches the value of the golden mean \((1 + \sqrt{5})/2\)]; Also Generating Equivalent Square Wave from a Sine Wave of given Amplitude and Frequency; And,. Obtaining the Covariance & Correlation Coefficient Matrices for a given Data Matrix.

Text Books:

Reference Books:
ES 12: Basic Thermodynamics

Text Books:
Reference Books:

(A) Solid Mechanics:

Module3: Shear Stresses- Derivation of formula – Shear stress distribution across various beam sections like rectangular, circular, triangular, I, T angle sections.

(B) Fluid Mechanics:

Module4: Fluid Properties and Fluid statics- Density, Specific weight, Specific gravity, viscosity, vapour pressure, compressibility, Pressure at a point, Pascal’s law, and pressure variation with temperature, density and attitude. Hydrostatic law, Piezometer, Simple and differential manometers, pressure gauges, total pressure and centre of pressure-plane, vertical and inclined surfaces. Buoyancy and stability of floating bodies.

Module5: Fluid kinematics- Stream line, path line and streak lines and stream tube, classification of flows-steady & unsteady, uniform & non uniform, laminar & turbulent, rotational & irrotational flows, one, two and three dimensional flows-Continuity equation in 3D flow, stream function, velocity potential function.

Module6: Fluid dynamics- Surface and body forces –Euler’s and Bernoulli’s equation derivation, Navier-stokes equation (explanation only) Momentum equation-applications, vortex-Free and Forced. Forced vortex with free surface.

Text Books:
4. Engineering Fluid Mechanics by K. L. Kumar, S.Chand & Co.

Reference Books:
A. **Strength of Materials** – **List of Experiments**
1. Tension test
2. Bending tests on simply supported beam and Cantilever beam.
3. Torsion test
5. Hardness tests (Brinnel’s and Rockwell)
6. Tests on closely coiled and open coiled springs
7. Compression test on wood or concrete
8. Impact test
9. Shear test

**Text/Reference Books:**
2. Laboratory Manual Of Testing Materials - [William Kendrick Hatt](mailto:)

B. **Fluid Mechanics** – **List of Experiments**
1. Calibration of Venturimeter & Orifice meter
2. Determination: Coefficient of discharge for small orifice/mouthpiece by constant head method.
3. Calibration of contracted Rectangular Notch and Triangular Notch
5. Determination of Coefficient for minor losses.
6. Verification of Bernoulli’s equation.

**Text/Reference Books:**

---

**ES 15: Engineering Mechanics**

**Module 1:** Statics –Basics Concepts, Fundamental principles & concepts: Vector algebra, Newton’s laws, gravitation, force (external and internal, transmissibility), couple, moment (about point and about axis), Varignon’s theorem, resultant of concurrent and non-concurrent coplanar forces, static equilibrium, free body diagram, reactions. Problem formulation concept; 2-D statics, two and three force members, alternate equilibrium equations, constraints and static determinacy; 3-D statics.

**Module 2:** Analysis of Structures- Trusses: Assumptions, rigid and non-rigid trusses; Simple truss (plane and space), analysis by method of joints. Analysis of simple truss by method of sections; Compound truss (statically determinate, rigid, and completely constrained). Analysis of frames and machines.

**Module 3:** Friction- Coulomb dry friction laws, simple surface contact problems, friction angles, types of problems, wedges. Sliding friction and rolling resistance.

**Module 4:** Moment of Inertia- First moment of mass and center of mass, centroids of lines, areas, volumes, composite bodies. Area moments- and products- of inertia, radius of gyration, transfer of axes, composite areas. Rotation of axes, principal area-moments-of-inertia, Mohr’s circle. Second moment of mass, Mass moments- and products- of inertia, radius of gyration, transfer of axes, flat
plates (relation between area- and mass- moments- and products- of inertia), composite bodies. Rotation of axes, principal mass-moments-of-inertia.

**Module 5: Virtual Work and Energy Method** Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.

**Module 6: Review of particle dynamics** Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton’s 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique).

**Module 7: Plane kinematics of rigid bodies** Rotation; Parametric motion. Relative velocity, instantaneous center of rotation. Relative acceleration, rotating reference frames. Rotating reference frames, 3-part velocity and 5-part acceleration relations, Coriolis acceleration. Applications of rotating reference frames.

**Module 8: Plane kinetics of rigid bodies** Kinetics of system of particles and derivations of moment equation. Translation. Fixed axis rotation; General planar motion. Work – kinetic energy, potential energy, power; Impulse-momentum. Impact; Combination problems.

**Text/Reference Books:**
9. NPTEL courses: [http://nptel.iitm.ac.in/courses.php](http://nptel.iitm.ac.in/courses.php), web and video resources on *Engineering Mechanics*.

**ES 16: Solid Mechanics**

**Module 1:** Simple Stresses and Strains- Concept of stress and strain, St. Venant’s principle, stress and strain diagram, Hooke’s law, Young’s modulus, Poisson’s ratio, stress at a point, stresses and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subjected to axial loading. Temperature stress and strain calculations due to applications of axial loads and variation of temperature in single and compound walls.

**Module 2:** Compound Stresses and Strains- Two dimensional system, stress at a point on a plane, principal stresses and principal planes, Mohr’s circle of stress, ellipse of stress and their applications. Two dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain. Relationship between elastic constants.
Module 3: Bending Moment and Shear Force Diagrams- Bending moment (BM) and shear force (SF) diagrams. BM and SF diagrams for cantilevers simply supported and fixed beams with or without overhangs. Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads (two or three) and uniformly distributed loads, uniformly varying loads, application of moments.

Module 4: Theory of bending stresses- Assumptions in the simple bending theory, derivation of formula: its application to beams of rectangular, circular and channel sections, Composite beams, bending and shear stresses in composite beams.

Module 5: Slope and deflection- Relationship between moment, slope and deflection. Moment area method, Macaulay’s method. Use of these methods to calculate slope and deflection for determinat beams.

Module 6: Torsion- Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts, torsional rigidity., Combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion. Analysis of close-coiled-helical springs.

Module 7: Thin Cylinders and Spheres- Derivation of formulae and calculations of hoop stress, longitudinal stress in a cylinder, and sphere subjected to internal pressures.

Module 8: Columns and Struts- Columns under uni-axial load, Buckling of Columns, Slenderness ratio and conditions. Derivations of Euler’s formula for elastic buckling load, equivalent length. Rankine Gordon’s empirical formula.

Text/Reference Books:

ES 17: Thermodynamics 2:2:0 [3]

Module 3: Second Law of Thermodynamics- Thermal energy reservoirs, heat engines energy conversion, Kelvin’s and Clausius statements of second law, the Carnot cycle, the Carnot Theorem, the thermodynamic temperature scale, the Carnot heat engine, efficiency, the Carnot
refrigerator and heat pump, COP. Clausius inequality, concept of entropy, principle of increase of entropy – availability, the increase of entropy principle, perpetual-motion machines, reversible and irreversible processes, Entropy change of pure substances, isentropic processes, property diagrams involving entropy, entropy change of liquids and solids, the entropy change of ideal gases, reversible steady-flow work, minimizing the compressor work, isentropic efficiencies of steady-flow devices, and entropy balance.

Energy - a measure of work potential, including work potential of energy, reversible work and irreversibility, second-law efficiency, exergy change of a system, energy transfer by heat, work, and mass, the decrease of exergy principle and exergy destruction, energy balance: closed systems and control volumes energy balance.

Module 5: Power Cycles- Vapour and combined power cycles, including the Carnot vapor cycle, Rankine cycle: the ideal cycle for vapor power, the ideal reheat and regenerative and the second-law analysis of vapour power cycles. Gas power cycles, including basic considerations in the analysis of power cycles, the Carnot cycle and its value in engineering, an overview of reciprocating engines, air standard assumptions, gasoline engine Otto cycle, diesel engine cycle, gas-turbine Brayton cycle, and the second-law analysis of gas power cycles.

Text/ Reference Books:

Module 1: Basic Crystallography- Crystal structure – BCC, FCC and HCP structure – unit cell – crystallographic planes and directions, miller indices. Crystal imperfections, point, line, planar and volume defects – Grain size, ASTM grain size number. Frank Reed source of dislocation Elastic & plastic modes of deformation, slip & twinning, strain hardening, seasons cracking, Bauschinger’s
effect, yield point phenomenon, cold/hot working, recovery, re-crystallization, and grain growth, strengthening of metals.

**Module 4:** Ferrous and Non Ferrous Metals- Effect of alloying additions on steel (Mn, Si, Cr, Mo, V Ti & W) - stainless and tool steels – HSLA. Gray, White malleable, spheroidal - Graphite - alloy cast-iron. Copper and Copper alloys – Brass, Bronze and Cupronickel. Aluminium and Al-Cu – precipitation strengthening treatment – Bearing alloys.

**Module 7:** Introduction to Science and Technology of Nano materials- Nano structured materials, Low-dimensional structures: Quantum wells, Quantum wires, and Quantum dots, Nano clusters & Nano crystals. Electronic and optical properties of nano crystallites, Metallic and semiconducting super lattices. Synthesis of nanostructured materials, Fabrication and characterization of nano electronic devices and MEMS. Basics of synthesis and characterization of nano-multi-component systems for sensors(magnetic, electronic and optical) and electrodes. Synthesis and fabrication of carbon nano structures for fuel cell and energy storage applications.

**Text/ Reference Books:**
(d) OPEN ELECTIVES

OE 01: Database Management Systems 3:0:2 [4]

Module 5: Advanced Topics- Fundamental Concepts of Transaction Management, XConcurrency Control, Recovery Systems, Data Analysis and OLAP. Introduction to Data Mining, Data Farming, Data Warehousing, Spatial and Geographic Databases, Temporal databases and Multimedia Databases.

Text Books:
2. An Introduction to Database Design – Date
3. Object-Oriented Database Design – Harrington

Reference Books:
1. Fundamentals of Database Systems – Elmasri and Navathe
2. Database Management and Design – Hansen and Hansen.

OE 02: Software Engineering 3:0:0 [3]

Text Books:
1. Fundamentals of Software Engineering – Carlo Ghezzi et. al.

Reference Books:
3. Software Engineering with Abstraction – Berzins and Luqi

OE 03: Design and Analysis of Algorithms

**Module 3:** Graph and Tree Algorithms: Depth- and Breadth- First traversals. Shortest path algorithms, Transitive closure, Minimum Spanning Tree, Topological sort, Network Flow problems.

**Module 5:** Advanced Topics: Approximation algorithms, Randomized algorithms, Class of problems beyond NP – PSPACE.

**Text Books:**
1. Algorithm Design – Jon Kleinberg and Eva Tardos
2. Introduction to Algorithms – T.H. Corman et. al.

**Reference Books:**

**OE 04: Disaster Management**

**Module 1:** Introduction (3 lectures)- Concepts and definitions: disaster, hazard, vulnerability, risk, capacity, impact, prevention, mitigation).

**Module 2:** Disasters (12 lectures)- Disasters classification; natural disasters (floods, draught, cyclones, volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills etc); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

**Module 3:** Disaster Impacts (5 lectures)- Disaster impacts (environmental, physical, social, ecological, economical, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate-change and urban disasters.

**Module 4:** Disaster Risk Reduction (DRR) (15 lectures)- Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post-disaster environmental response (water, sanitation, food safety, waste management, disease control); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

**Module 5:** Disasters, Environment and Development (5 lectures)- Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land-use changes, urbanization etc.), sustainable and environmental-friendly recovery; reconstruction and development methods.
OE 05: Project Management

Module 1: Introduction to Project management: Characteristics of projects, Definition and objectives of Project Management, Stages of Project Management, Project Planning Process, Establishing Project organization.

Module 3: Developing Project Plan (Baseline), Project cash flow analysis, Project scheduling with resource constraints: Resource Levelling and Resource Allocation. Time Cost Trade off: Crashing Heuristic.

Module 5: Post-Project Analysis.

Text/Reference Books:
1. Shtub, Bard and Globerson, Project Management: Engineering, Technology, and Implementation, Prentice Hall, India
7. P. K. Joy, Total Project Management: The Indian Context, Macmillan India Ltd.

Additional Readings:

OE 06: Engineering Risk – Benefit Analysis

and Control, Risk Acceptance, Risk Communication, Identifying and structuring the Engineering risk problem; developing a deterministic or parametric model

**Module 4:** Decision Analysis: Risk Aversion, Risk Homeostasis, Influence Diagrams and Decision Trees, Discounting Procedures, Decision Criteria, Tradeoff Analysis, Repair and Maintenance Issues, Maintainability Analysis, Repair Analysis, Warranty Analysis, Insurance Models

**Module 5:** Data Needs for Risk Studies: Elicitation Methods of Expert Opinions, Guidance

**Text Books:**

**Reference Books:**

**OE 07: Infrastructure Systems Planning**

**Module 1:** Infrastructure Systems Planning- An Overview Definitions, Infrastructure management activities, Evolutions of Systems since 1960s (Mainframes-to-Midrange-to-PCs-to-Client-server computing-to-New age systems) and their management, growth of internet, current business demands and IT systems issues, complexity of today's computing environment, Total cost of complexity issues, Value of Systems management for business.

**Module 2:** Preparing for Infrastructure Systems Planning & Management- Factors to consider in designing IT organizations and IT infrastructure, Determining customer's Requirements, Identifying System Components to manage, Exist Processes, Data, applications, Tools and their integration, Patterns for IT systems management, Introduction to the design process for information systems, Models, Information Technology Infrastructure Library (ITIL).

Module 4: Storage and Security Management
Introduction Security, Identity management, Single sign-on, Access Management, Basics of network security, LDAP fundamentals, Intrusion detection, Firewall; security information management Introduction to Storage, Backup & Restore, Archive & Retrieve, Space Management, SAN & NAS, Disaster Recovery, Hierarchical space management, Database & Application protection, Bare machine recovery, Data retention.

Module 5: System thinking method for model-building of infrastructural planning Model observation, Construction of model structure, Simulation analysis, Multi-agent system.

Text/Reference Books:

OE 08: Planning for Sustainable Development

Module 1: Sustainable Development-explains and critically evaluates the concept of sustainable development, Environmental degradation and poverty Sustainable development: its main principles, the evolution of ideas about sustainability, strategies for promoting sustainable development, resistances to the concept, and some alternative approaches. Examine some important current issues and areas of debate in relation to sustainable development.

Module 2: Innovation for sustainable development- Environmental management and innovation strategies.

Module 3: Societal transformations. Institutional theory.

Module 4: Governance for sustainable development. Policy responses to environmental degradation.

Module 5: Capacity development for innovation. Research methods.

Text/Reference Books:

**Additional References:**
http://www.sustainability.com/developing-value/definitions.asp

**OE 09: Managing Innovation and Entrepreneurship**

*Module 1*: Introduction to Entrepreneurship: Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies. Entrepreneurial growth and development.

*Module 3*: Entrepreneurial Motivation: Need for continuous learning & relearning Acquiring Technological Innovation Entrepreneurial motivation (nAch story) Achievement Motivation in Real life.. Case Study.

**Text/Reference Books:**

**OE 10: Global Strategy and Technology**

*Module 1*: Introduction to Global Strategy- What the motivations to expand abroad are and how firms can manage conflicting demands in terms of global integration, local responsiveness and worldwide learning. How Global are We? How global most MNCs are? The End of Corporate Capitalism Beyond Off shoring Distance Still Matters Going International.
Module 2: Location and Global Strategy: Home-Country Effects: Shifting global leadership in the watch industry Success of Swatch as a company in this industry Potential threat on the horizon that could once again cause the decline of the Swiss watch industry. Distance and Global Strategy: Host Country Choices: The Globalization of CEMEX The benefits that CEMEX has derived from expanding across borders Challenges that CEMEX is likely to confront in the future How far can Cemex’s competitive advantage travel. Industry Characteristics and Global Strategy: Host - country choices: Characteristics of the global large appliances industry Design of an effective competitive strategy Haier’s current global strategy Good rationale for Haier to make global expansion its top strategic priority.

Module 3: International Corporate Governance: International Corporate Governance with Chinese Characteristics Corporate governance matters in China’s capital market Corporate governance model in China differ from international standards Special problems associated with Petro China’s corporate governance model Conditions required for further reforms in Petro China’s corporate governance system. Cross-cultural Negotiation: Learn from the MOUSE negotiation Issues/factors affect positively or negatively & the negotiation outcome Issues crucial in aligning different parties interests. Negotiators attitudes and culture in reaching the agreement The role of information acquisition in reaching an agreement in this negotiation. Foreign Market Entry Strategies: Issues around geographic market diversification and different strategies of internationalization Different entry modes into a foreign market Stages of internationalization International operations Tensions of a family-owned enterprise going international.

Module 5: Investing in R&D Capabilities: Incentives to Innovate Investing in basic/applied research; Real options and other approaches. Applying the Concepts and Frameworks: R&D Investment Decisions: Applying the NPV, Real Options and Scenario-Planning Frameworks.

Text/Reference Books:
OE 11: Knowledge Management

Module 1: Introduction: Definition, evolution, need, drivers, scope, approaches in Organizations, strategies in organizations, components and functions, understanding knowledge; Learning organization: five components of learning organization, knowledge sources, and documentation.

Module 2: Essentials of Knowledge Management; knowledge creation process, knowledge management techniques, systems and tools.

Module 3: Organizational knowledge management; architecture and implementation strategies, building the knowledge corporation and implementing knowledge management in organization.

Module 4: Knowledge management system life cycle, managing knowledge workers, knowledge audit, and knowledge management practices in organizations, few case studies.

Module 5: Futuristic KM: Knowledge Engineering, Theory of Computation, Data Structure.

Text Books:
2. Knowledge Management- Elias M. Awad Hasan M. Ghazri, Pearson Education

Reference Books:
2. The Fifth Discipline Field Book – Strategies & Tools For Building A learning Organization – Peter Senge et al. Nicholas Brealey 1994
3. Knowledge Management – Sudhir Warier, Vikas publications

OE 12: Rural Technology and Community Development

Module 2: Data, Information and Knowledge; concept of information, need of information (professional, educational, research), qualities of information, value of information, difference between data and information, properties of the needed information. Information and Management; planning, organizing, co-ordinating and controlling,

Module 3: Concepts of marketing; difference between marketing selling and retailing; marketing mix, market-segmentation, marketing planning. Strategy and Approaches; modern concept of marketing.

Module 4: Community development; concept, definition, meaning, need, history, principles, objectives and scope. Community Building: Coming of Age, Regenerating Community, Community Model.
Module 5: Consensus Organizing Model, What's Behind Building Healthy Communities? Participatory Democracy. The Role of various NGOs in Community Development. The Role of Business and Government in Community Development Initiatives. How to Form a Non-profit Corporation Fund Raising and Grant Writing.

Text/Reference Books:

OE 13: Artificial Intelligence and Robotics

Module 1: Scope of AI - Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems, AI techniques- search knowledge, abstraction.

Module 2: Problem solving - State space search; Production systems, search space control: depth-first, breadth-first search, heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis

Text Books:
3. Robin R Murphy, Introduction to AI Robotics PHI Publication, 2000

Reference Books:

OE 14: Cloud Computing 3:0:0 [3]

Module 1: Introduction- Shift from distributed computing to cloud computing; principles and characteristics of cloud computing- IaaS, PaaS, SaaS; service oriented computing and cloud environment

Module 2: Cloud Computing Technology-Client systems, Networks, server systems and security from services perspectives; Accessing the cloud with platforms and applications; cloud storage

Module 4: Using Cloud Services-Cloud collaborative applications and services – case studies with calendars, schedulers and event management; cloud applications in project management.

Module 5: Case studies- Microsoft Azure, Google App Engine and Open source clouds- OpenNebula and Eucalyptus

Text Books:

Reference Books:
1. Resources from Internet /WWW.

OE 15: Digital Communication 3:0:0 [3]

Module 4: Error Control Coding- Discrete memory-less channels – Linear block codes - Cyclic codes - Convolutional codes – Maximum likelihood decoding of convolutional codes-Viterbi Algorithm, Trellis coded Modulation, Turbo codes.

Text Books:

Reference Books:

OE 16: Digital Signal Processing

Module 2: Time Domain Representation of Signals & Systems- Discrete Time Signals, Operations on Sequences, the sampling process, Discrete-Time systems, Time-Domain characterization of LTI Discrete-Time systems, state-space representation of LTI Discrete-Time systems, random signals.

Module 3: Transform-Domain Representation of Signals-The Discrete-Time Fourier Transform, Discrete Fourier Transform, DFT properties, computation of the DFT of real sequences, Linear Convolution using the DFT. Z-transforms, Inverse ztransform, properties of z-transform, transform domain representations of random signals. Transform-Domain Representation of LTI Systems: the frequency response, the transfer function, types of transfer function, minimum-phase and maximum-Phase transfer functions, complementary transfer functions, Discrete-Time processing of random signals.

Module 5: Digital Filter Structure and Design- Block Diagram representation, Signal Flow Graph Representation, Equivalent Structures, bone FIR Digital Filter Structures, IIR Filter Structures,

**Text Books:**

**Reference Books:**
1. Allan Y. Oppenhein & Ronald W. Schater , "Applications DSP”.
2. C.Sydney Burrus (Eds), DSP and Digital Filter Design

**OE 17: Engineering System Analysis and Design 3:0:0 [3]**

*Module 1:* INTRODUCTION- Systems, Elements of a system, Types of systems, Subsystems, Super systems, Need for system analysis and design, CASE tools for analysis and its limitations.

*Module 2:* System Analysis-Methods of system analysis, system development life cycle, structured approach, development tools, data base and networking techniques.

*Module 3:* System design- Design technologies, Design principles, Design tools and methodologies, feasibility survey, conversion and testing tools, design management and maintenance tools.

*Module 4:* Object oriented analysis and design- Introduction, Object modeling, Dynamic modeling, functional modelling, UML diagrams and tools.

*Module 5:* Case studies- Developing prototypes for systems like, online exam management, Computer gaming and online website management.

**Text Books:**

**Reference Books:**

**OE 18: Engineering System Design Optimization 3:0:0 [3]**

*Module 1:* Introduction- Optimization problem formulation, optimization algorithms, applications and examples, different optimization methods available.

*Module 2:* Single Variable optimization-Optimization criteria, bracketing methods – Exhaustive search method, bound phase method; Region Elimination methods – Fibonacci search method, Golden search method; Gradient based methods – Newton Raphson method, Bisection method; Root finding using optimization technique.
Module 3: Multi objective optimization- Optimization criteria, Different search methods, Unidirectional search, Direct search method – Evolutionary optimization method, Powell’s conjugate direction method; Gradient based methods – Newton’s method and Variable metric method.

Module 4: Specialized Methods- Integer programming, Geometric programming, simulated annealing, Global optimization using - steep descent method, simulated annealing.

Module 5: Genetic algorithms and evolutionary approaches-Differences and similarities between genetic algorithms and traditional techniques, operators of GA’s, Computer program for simulated annealing, Newton Raphson method, Evolutionary optimization method.

Text Books:

Reference Books:
1. Taha, Operations Research, TMH 2010

OE 19: Engineering System Modeling and Simulation 3:0:0 [3]

Module 1: Introduction-Systems, System types, System Modeling, Types of system modelling, Classification and comparison of simulation models, attributes of modelling, Comparison of physical and computer experiments, Application areas and Examples

Module 2: Mathematical and Statistical Models- Probability concepts, Queuing Models, Methods for generating random variables and Validation of random numbers.

Module 3: Language-System modelling, programming languages, comparison of languages, Identifying and selection of programming language, feasibility study of programming language for the given application.

Module 4: Experiments-Simulation of different systems, Analysis, validation and verification of input and output simulated data, study of alternate techniques.

Module 5: Case study-Developing simulation model for information centers, inventory systems and analysis of maintenance systems.

Text Books:

Reference Books:

OE 20: Game theory with Engineering Applications 3:0:0 [3]

Module 2: Mixed Strategy Nash Equilibrium- Randomization of Actions, Mixed strategy Nash equilibrium, Dominated actions, Pure strategy equilibria in the presence of randomization, Illustrations: (1) expert diagnosis (2) reporting a crime. Finding all mixed strategy Nash equilibria of some representative games.

Module 5: Coalitional Games- Coalitional games. The Core. Illustrations: (1) Ownership and distribution of wealth (2) exchanging homogeneous items (3) exchanging heterogeneous items (4) voting (5) matching. Shapley value and examples.

Text Books:

Reference Books:

OE 21: Supply Chain Management- Planning

Module 1: Introduction to Supply Chain- Supply chain systems, stages and decision phases and process view of supply chain; supply chain flows; examples of supply chains; competitive supply chain strategies; drivers for supply chain performance.

Module 2: Designing the Supply Chain Network- Distribution Networking – role, design; Supply Chain Network – SCN- Role, factors; framework for design decisions.
Module 3: Facility Location and Network Design- Models for facility location and capacity location; Impact of uncertainty on SCN – discounted cash flow analysis; evaluating network design decisions using decision trees; analytical problems.

Module 4: Planning and Managing Inventories in a Supply Chain- Inventory concepts, trade promotions; managing multi-echelon cycle inventory, safety inventory determination; impact of supply uncertainty aggregation and replenishment.

Module 5: Sourcing, Transportation and Pricing Products-Role of sourcing, supplier- scoring and assessment, selection and contracts, design collaboration; role of transportation, models of transportation and designing transportation network; revenue management.

Text Books:
1. Sunil Chopra and Peter M, Supply Chain Management, Pearson publishing, 2001

Reference Books:

(e) MANDATORY COURSES

MC 01: Technical English 3:0:0 [3]

Module 1: Language Focus- Technical vocabulary, Synonyms and Antonyms, Numerical adjectives, Conjunction and Preposition clauses, Noun and adjective clauses, Abbreviations, Acronyms and homonyms, Phrasal verbs and idioms.

Module 2: Language Focus- Relative clauses, Imperative and infinitive structures, Question pattern, Auxiliary verbs (Yes or No questions), Contrasted time structures, Adverbial clauses of time, place and manner, Intensifiers, Basic pattern of sentences.

Module 3: Reading- Intensive reading, Predicting content, Interpretation, Inference from text, Inferential information, Implication, Critical Interpretation, Reading brief notices, advertisements, editorial of news papers.

Module 4: Listening- Listening to lectures, seminars, workshops, News in BBC, CNN TV channels, Writing a brief summary or answering questions on the material listened.

Module 5: Speaking- Pronunciation, stress and intonation, Oral presentation on a topic, Group discussion, Accepting others’ views / ideas, Arguing against others’ views or ideas, Interrupting others’ talk, Addressing higher officials, colleagues, subordinates, a public gathering, a video conferencing.

Text Books:
1. ------, English for Engineers and Technologists, Volumes 1 and 2, Department of Humanities and Social Sciences, Anna University, Chennai, Orient Longmans Publication, 2008.

Reference Books:

MC 02: Value Education, Human Rights and Legislative Procedures 3:0:0 [3]

Module 1: Values and Self Development-Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non moral valuation, Standards and principles, Value judgments. Importance of cultivation of values, Sense of duty, Devotion, Self reliance, Confidence, Concentration, Truthfulness, Cleanliness, Honesty, Humanity, Power of faith, National unity, Patriotism, Love for nature, Discipline.

Module 2: Personality and Behavior Development- Soul and scientific attitude, God and scientific attitude, Positive thinking, Integrity and discipline, Punctuality, Love and kindness, Avoiding fault finding, Free from anger, Dignity of labor, Universal brotherhood and religious tolerance, True friendship, Happiness vs. suffering love for truth, Aware of self destructive habits, Association and cooperation, Doing best, Saving nature.

Module 3: Character and Competence- Science vs. God, Holy books vs. blind faith, Self management and good health, Science of reincarnation, Equality, Nonviolence, Humility, Role of women, All religions and same message, Mind your mind, Self control, Honesty, Studying effectively.

Module 5: Legislative Procedures- Indian constitution, Philosophy, fundamental rights and duties, Legislature, Executive and Judiciary, Constitution and function of parliament, Composition of council of states and house of people, Speaker, Passing of bills, Vigilance, Lokpal and functionaries.

Text Books:

Reference Books:

MC 03: Environmental Studies 3:0:0 [3]
Module 1: Introduction and Natural Resources: Multidisciplinary nature and public awareness, Renewable and nonrenewable resources and associated problems, Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources, Conservation of natural resources and human role.

Module 2: Ecosystems: Concept, Structure and function, Producers composers and decomposers, Energy flow, Ecological succession, Food chains webs and ecological pyramids, Characteristics structures and functions of ecosystems such as Forest, Grassland, Desert, Aquatic ecosystems.

Module 3: Biodiversity and Conservation: Definition, Genetic, Species, and Ecosystem diversity, Bio-geographical classification of India, Value of biodiversity at global, national, local levels, India as a mega diversity nation, Hot sports of biodiversity, Threats to biodiversity, Endangered and endemic species of India, In-situ and ex-situ conservation of biodiversity.

Module 4: Environmental Pollution: Definition, Causes, effects and control of air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, nuclear hazards, human role in prevention of pollution, Solid waste management, Disaster management, floods, earthquake, cyclone and landslides.

Text Books:

Reference Books:

MC 04: Energy Studies

Module 1: Energy Sources - Fossil fuels, Nuclear fuels, hydel, solar, wind and bio fuels in India, Energy conservation, Nuclear energy through fission and fusion processes.

Module 3: Global Energy Scenario- Role of energy in economic development and social transformation, Overall energy demand, availability and consumption, Depletion of energy resources and its impact on economy, Non proliferation of nuclear energy. International energy policies of G-8, G-20, OPEC and European union countries.
Module 4: Indian Energy Scenario- Commercial and noncommercial forms of energy, Utilization pattern in the past, present and also future prediction, Sector wise energy consumption.

Text Books:

Reference Books:

MC 05: Technical Communication and Soft Skills 3:0:0 [3]

Module 1: Information Design and Development- Different kinds of technical documents, Information development life cycle, Organization structures, factors affecting information and document design, Strategies for organization, Information design and writing for print and for online media.

Module 2: Technical Writing, Grammar and Editing- Technical writing process, forms of discourse, Writing drafts and revising, Collaborative writing, creating indexes, technical writing style and language. Basics of grammar, study of advanced grammar, editing strategies to achieve appropriate technical style. Introduction to advanced technical communication, Usability, Human factors, Managing technical communication projects, time estimation, Single sourcing, Localization.

Module 3: Self Development and Assessment- Self assessment, Awareness, Perception and Attitudes, Values and belief, Personal goal setting, career planning, Self esteem.

Module 4: Communication and Technical Writing- Public speaking, Group discussion, Oral; presentation, Interviews, Graphic presentation, Presentation aids, Personality Development. Writing reports, project proposals, brochures, newsletters, technical articles, manuals, official notes, business letters, memos, progress reports, minutes of meetings, event report.

Module 5: Ethics- Business ethics, Etiquettes in social and office settings, Email etiquettes, Telephone Etiquettes, Engineering ethics, Managing time, Role and responsibility of engineer, Work culture in jobs, Personal memory, Rapid reading, Taking notes, Complex problem solving, Creativity.

Text Books:
1. David F. Beer and David McMurrey, Guide to writing as an Engineer, John Willey. New York, 2004

Reference Books:

**MC 06: Foreign Language: French**

**Module 1:** Pronunciation guidelines; Single vowels, Accentuated vowels, Vowels and consonants combinations, Consonants; Numbers 1-10 Articles and Genders; Gender in French, Plural articles, Some usual expressions

**Module 2:** Pronouns and Verbs; The verb groups, The pronouns, Present tense, Some color Adjectives and Plural ; Adjectives, Some adjectives, Our first sentences, More Numbers

**Module 3:** Sentences Structures; Some Prepositions, Normal Sentences, Negative Sentences, Interrogative Sentences, Exercises The Family; Vocabulary .Conversation, Notes on Pronunciation, Notes on Vocabulary, Grammar, Liaisons Guideline

**Module 4:** D'où viens-tu (Where do you come from); Vocabulary, Conversation, Notes on Vocabulary, Liaisons Guidelines . Comparer (Comparing); Vocabulary, Conversation, Notes on Vocabulary, Grammar Liaisons Guidelines, Ordinal Numbers

**Module 5:** Le temps (Time); Vocabulary, Grammar, Time on the clock Additional French Vocabulary; Vocabulary related to - The Family, Vocabulary related to - Where do you come from?

**Module 6:** French Expressions and Idioms; Day-to-day Life, At Work, The car, Sports, Special Events Other French Flavours; Nos cousins d'Amérique - Québec et Acadi, Au pays de la bière et des frites, Mettez-vous à l'heure Suisse, Vé, peuchère, le français bien de chez nous

ME 01: Mechanisms and Machines 3:2:2 [4]

Module 2: Kinematic Analysis- Concepts of vectorial analysis. Velocity and Acceleration Analysis of planar mechanisms.

Module 3: Cams- Classification, Cams with uniform acceleration and retardation, SHM, Cylcloidal motion, oscillating followers.

Module 4: Vibrations- Vibration analysis of SDOF systems, Natural, damped forced vibrations, Based-excited vibrations, transmissibility ratio.

Module 5: Gears- Geometry of tooth profiles, Law of gearing, Involute profile, interference, helical, spiral and worm gears, simple, compound gear trains. Epicyclic gear trains – Analysis by tabular and relative velocity method, fixing torque.

Module 6: Dynamic Analysis- Slider-crank mechanisms, turning moment computations.

Module 7: Balancing- Static and Dynamic balancing Balancing of revolving & reciprocating masses in single and multi-cylinder engines.

Module 8: Gyroscopes- Basic concepts Gyroscopic law, effect of gyroscopic couple on automobiles, ships, aircrafts.

Text/Reference Books:
9. PTEL courses: http://nptel.iitm.ac.in/courses.php, related web and video resources on Kinematics of Machines and Dynamics of Machines.

ME 02: CAD and Computer Graphics 1:0:2 [2]

Module 1: Introduction- Need and Scope of Computer Aided Design, Fundamental of CAD and computer graphics- Application areas, Hardware and software- overview of graphics systems, video-display devices, and raster-scan systems, random scan systems, graphics monitors and
workstations and input devices. Interactive hardware/software techniques, Drawing standards, dimensioning and text writing, concept of layers, advanced concepts of CAD software- blocks, UCS, 3D-line, 3D object, DXF & DXB file formats. Output primitives- Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives Scan line polygon fill algorithm, boundary fill and flood-fill algorithms.

Module 2: 2-D geometrical transforms- Translation, scaling, rotation, reflection and shear transformations. Matrix representations and homogeneous coordinates, composite transforms, transformations between coordinate systems. 2-D viewing- The viewing pipeline, viewing coordinate reference frame. Window to view port coordinate transformation, viewing functions. Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland –Hodgeman polygon clipping algorithm.

Module 3: 3-D Object Representation- Polygon surfaces, quadric surfaces, spline representation. Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces. Basic illumination models, polygon-rendering methods. 3-D viewing- Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping.

Module 4: 3-D Geometric transformations- Translation, rotation, scaling, reflection and shear transformations, composite transformations. Visible surface detection methods- Classification, back-face detection, depth buffer, scan-line, depth sorting, BSP-tree methods, area sub-division and octree methods.

Module 6: Introduction to CAD CAM- Overview, orientation and application commands of CAD and CAE modeling software platforms for feature based Parametric and Variation modelling and analysis. Boolean, and sweep operations on primitives with applications to CAD of machine elements.

Text/ Reference Books:
7. NPTEL courses http://nptel.iitm.ac.in/courses.php- web and video resources on Computer Aided Design and Manufacturing.

ME 03: Engineering Workshop II

(Practical Hands-on Training with one hour lecture covering salient features of following Modules):
Module 1: Turning- Taper turning using tailstock offset method and taper turning attachment. Eccentric external turning using a four jaw chuck.

Module 2: Boring- Using a boring tool – both concentric and eccentric. Boring using a boring bar in a centre lathe. Square and hexagonal hole drilling using die-sinking EDM.

Module 3: Grinding- Cylindrical grinding using grinding attachment in a centre lathe

Module 4: Thread Cutting- Internal and external thread cutting using a single point cutting tool.

Module 5: Gears- Cutting teeth of spur gears using form milling cutter in a universal milling machine, Gear hobbing, Gear shaping.

Text/Reference Books:

ME 04: Design of Machine Elements

Module 2: Design procedure and applications of Statically Loaded Machine Elements- Design of elements subjected to simple loading: Riveted joints, Screws including power screws Bolted joints including eccentrically loaded joints, Axles, and coupling, Clutches and brakes.

Module 3: Fatigue- Introduction to design for fatigue strength. Endurance and modifying factors. Surface strength. Review of design procedure of fatigue failure with application to the design of bolts and springs subjected to fatigue loading.

Module 4: Design procedure and applications of Dynamically Loaded Machine Elements. Shafts, Spur, helical, bevel and worm gears, Journal and rolling contact bearings, Belts and chains. Assemblies of various machine elements like those of a screw jack and a gear box.

Text/Reference Books:
ME 05: Primary Manufacturing

Module 1: General Introduction- Manufacturing; definition and broad classification with typical examples of applications.

Module 2: Casting -Introduction; History of the technology; Definition and major classification; Casting materials, Sand mould casting:- Basic principles with simple examples of a solid casting and a hollow casting. Patterns; types, material and design including pattern allowances; Moulding sands; composition, preparation, properties and testing; Core; Purpose, definition, materials, preparation and applications; Design of gating system; pouring basin, sprue, runner and risers; Advantages, limitations and applications of top gate, bottom gate, parting gate and step gate; Estimation of pouring time for top gate and bottom gate type moulds. Foundry equipment and furnaces. Melting, pouring and solidification. Principles, method, relative advantages and applications of floor mould casting, shell mould casting, pit mould and loam mould casting CO2 mould casting; centrifugal casting ( pure, semi and centrifuging types) investment casting including mercasting ; Permanent mould casting. Die casting; types, methods, relative advantages and applications Slush casting; principle and use, Casting defects; types, causes and remedy

Module 3: Forming Processes - Introduction; General principles; major classification with typical examples ;Hot working and cold working; principle, purpose, relative advantages and applications. Forging:-Definition and classification giving few example of application; work materials different forging operations, tools and equipment ; Smithy, drop forging and press forging (pressing) methods and use; Forging dies ;types, materials and design. Rolling:-Introduction ; basic principles and general applications; Characteristics and applications of hot rolling and cold rolling; various rolling processes and applications and rolled products; Roll pass design for different products Wire drawing and Extrusion:- Basic principles and requirements; Classification, methods and applications; Work materials and products; Press tool works; Basic principles, system, operations and applications.
Shearing; Parting, notching, blanking and piercing. Cupping(drawing) and deep drawing. Design of blanks for any shearing and cupping operation. Estimation of forces and power required for shearing and cupping operations. Coining and embossing ; basic principle and methods. Other forming processes:- Principles, methods, essential requirements and applications of Spinning and flow turning; Bulging; Hydro forming; Magneto forming; Explosive forming.

Module 4: Welding- Introduction: Major classes of joining; Mechanical joining; temporary, semi-permanent and permanent Giving examples; Welding; Brazing and soldering; Adhesive bonding; Welding in Liquid state. Fusion welding: - Introduction; basic principle, definition and major classification; characteristics and applications of different fusion welding processes using different heat-sources. Heat source:-chemical; gas welding; thermit welding; Heat source:-electrical; Arc welding; Manual arc welding; Submerged arc welding; TIG and MIG; Induction welding; Plasma arc welding; Resistance welding; Spot welding; Butt welding; Seam welding; Projection welding. Laser beam welding and electron beam welding. Solid state welding: - Principles. Methods, requirements and application of the different types; Solid state welding in hot condition; Forge welding; Friction welding; Diffusion welding; Solid state welding in cold condition; Ultrasonic
welding. Pressure welding. Explosive welding. Welding defects; Types, causes, effects and remedy.

**Text /Reference Books:**
5. Date, P. P. Introduction to manufacturing processes; Jaico Publishing House.

**ME 06: Fluid Mechanics 2:2;2 [4]**

*Module 1:* Basic Concepts and Properties- Fluid – definition, distinction between solid and fluid - Modules and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension. Fluid statics concept of fluid static pressure, absolute and gauge pressures – pressure measurements by manometers and pressure gauges. Hydrostatic forces on submerged surfaces, Stability of floating bodies.

*Module 5:* Hydraulic Pumps- Pumps definition and classifications. Centrifugal pump classifications, working principles, velocity triangles, specific speed, efficiency and performance curves. Reciprocating pump classification, working principles, indicator diagram, work saved by air vessels and performance curves, cavitation in pumps Rotary pumps working principles of gear and vane pumps.

**Text /Reference Books:**
ME 07: Heat Transfer

Module 5: Free Convection- Development of Hydrodynamic and thermal boundary layer along a vertical plate – Use of empirical relations for vertical plates and pipes.

Module 7: Radiation Heat Transfer- Emission characteristics and laws of black-body radiation, Irradiation total and monochromatic quantities, laws of Planck, Wien, Kirchhoff, Lambert, Stefan
and Boltzmann, heat exchange between two black bodies, concepts of shape factor. Emissivity heat exchange between grey bodies radiation shields electrical analogy for radiation networks.

**Text/Reference Book :**

**ME 08: Control Engineering**

*Module 1:* Introduction to Control-Brief history and developments in Feedback control.

*Module 2:* Modeling of physical systems- Mechanical, electrical, thermal and hydraulic systems. Concepts of state, state variable, state model. State models for linear continuous time functions, state space model formulation. Block diagram and signal flow graph analysis, transfer function. *(Modern approaches such as Bond graphs may be used for modeling and control.)*

*Module 5:* State variable Analysis- Solution of state equations. Concepts of controllability and observability. Pole placement design. Proportional, Integral and Derivative feedback. Simple case studies. *(These may be supported using software such as MATLAB.)*

**Text/Reference Books:**

9. NPTEL courses, [http://nptel.iitm.ac.in/courses.php](http://nptel.iitm.ac.in/courses.php), web and video courses on Control Engineering by Professor Gopal, M., Prof. Agashe, S. D, and Sivakumar, M. S.
ME 09: Integrated Design & Manufacturing

Module 1: Life cycle of Mechanical Equipment Design.

Module 2: Requirements of life cycle personnel like customer, management, marketing, manufacturing, transportation, etc.

Module 3: Role of analysis, creativity/innovation, decision making and information processing in engineering design and problem solving.

Module 4: Practice in engineering problem solving and designing. DFMA to meet requirements of design and manufacturing.

Text/Reference Books:
1. Asimow, M. Theory and principles of engineering design: Course 106B: Engineering Design: Dept. of Engineering, Univ. of Calif.
2. Asimov, M. Introduction to design: Prentice-Hall.
8. NPTEL courses: http://nptel.iitm.ac.in/courses.php - web and video resources on Design for Manufacturing.

ME 10: Machine Tools and Machining

Part – A: Machine Tools and Machining

Module 2: Basic Kinematic Structure of Centre Lathe- Kinematic analysis of: Speed Gear Box, Feed Gear Box, Apron Mechanism, Thread Cutting. Tool Geometry- Detailed discussions restricted to ASA, ORS and MRS and for single point cutting tool as well as WRS, Introduction to NRS. Introduction to tool geometry of milling cutters and drills.

Module 3: Mechanism of Chip Formation- Detailing on chip formation mechanism of brittle and ductile work material. Chip reduction coefficient, shear angle. Kronenberg’s relation. Build-up edge (BUE). Cutting strain, cutting strain rate, orthogonal machining, causes and modelling of chip deviation concept of effective rake, concept of oblique machining. Effect of process parameters
and tool geometry on mechanism of chip formation. Introduction to characteristics of chip formation in milling.

**Module 5:** Tool Wear, Tool Life and Tool Material- Different mechanism of tool wear. Types of tool wear (crater, flank etc). Measurement and control of tool wear, Concept of tool life, Taylor’s tool life equation (including modified version). Different tool materials and applications including effect of tool coating. Machining Time- Estimation of machining time in different machining operations, Introduction to economics of machining, Revisit to the concept of machinability.

**Module 6:** Introduction To Grinding- Need and different methods of grinding. Wheel specifications, Mechanics of grinding, Similarities and differences between grinding and machining. Basic Kinematic systems and operations of Other Machine Tools- Kinematic system and operations of drilling machines. Kinematic system and operations of milling machines. Construction, working principle and applications of shaping, planing and slotting.

**Part – B: Metrology**

**Module 1:** Precision and Accuracy- Methods of estimating accuracy and precision; Needs for accuracy and precision; Standards and their evolution; Types of errors in measurements. Limits, Fits and Tolerances, & Gauge Design- Basic concepts in limits, fits and tolerances Tolerance grades; ISO system of tolerance, Principles gauge design. Work Shop and Inspection gauges.

**Module 2:** Screw Thread Measurement- Standard thread profiles, Different Thread Elements, Effective diameter, 2 wire and 3 wire methods as applied to standard and non-standard thread profiles, Best wire size, Virtual Effective Diameter. Surface Roughness- Sources of surface irregularities in manufacturing, Different elements of surface roughness, Definition of center line and related roughness parameters, Measurement Instruments, Profilometers, Analysis of roughness signal in frequency domain.

**Module 3:** Gear Metrology- Different types of gears, Basic elements of a gear, Involute function, Relations between different gear elements of spur and helical gears, Virtual number of teeth, Use of gear tooth Vernier for chordal and constant chordal measurements, Span measurement using Base Tangent Micrometers. Coordinate Measuring Machines- Introduction to Coordinate Measuring Machines.

**Text/Reference Books:**
2. Bhattacharyya A, Theory & Practice Of Metal Cutting, New Central Book Agency
ME 11: Non-Traditional and Computer Aided Manufacturing

Part-A: Non-Traditional Manufacturing

Module 2: Process Description, Modelling, Application and Product Quality Related Issues- Abrasive Jet Machining, Ultrasonic Machining, Water Jet Machining, Abrasive Water Jet Machining, Electro-Discharge Machining, Chemical & Photo Chemical Machining, Electro-Chemical Machining, Electron Beam Machining, Laser Beam Machining.

Part – B: Computer Aided Manufacturing

Module 1: Introduction- Relation between production volume and flexibility. Various manufacturing systems – batch, mass, group, cellular and flexible manufacturing systems; Type of automation and benefits of soft or flexible automation.

Module 2: Automation in Material Handling and Assembly.

Module 3: CNC Machines- Introduction, classification, design and control features including interpolations.

Module 4: NC Part-Programming;

Module 5: Introduction to Robotics-Definitions, motivation, historical development. Basic structure, classification, workspace, drives, controls, sensors, grippers, specifications

Text/Reference Books:
ME 12: IC Engines and Refrigeration

Part A: IC Engines

Module 4: Engine systems and components-Ignition system.(battery, magneto & electronic); Lubrication system; Engine starting system; Engine cooling system; Governing system (quality and quantity hit & miss governing); Intake and exhaust systems (two valves & four valves); Drive train (cam shaft, valves etc.)

Module 5: Performance characteristics & Testing of I.C. Engines-Introduction to Indian. Standards for testing of I.C. Engine, Mean effective pressure, indicated power, brake power, friction power, Methods to determine power and efficiencies Variables affecting performance of engine, characteristic curves, heat balance sheet, Methods of improving engine performance; super & turbocharged engines.

Part B: Refrigeration

Module 1: Introduction- Necessity and applications; Module of refrigeration and C.O.P. Mechanical Refrigeration: Types of Ideal cycles of refrigeration. Air Refrigeration: Bell Coleman cycle and Brayton Cycle, Open and Dense air systems ; Actual air refrigeration system problems ; Refrigeration needs of Aircrafts.

Module 2: Vapour Compression Refrigeration- Working principle and essential components of the plant ;Simple Vapour compression refrigeration cycle ;COP ;Representation of cycle on T-S and p-
h charts; effect of sub cooling and super heating; cycle analysis; Actual cycle Influence of various parameters on system performance; Use of p-h charts; numerical Problems.

Module 4: Vapor Absorption Refrigeration- Calculation of max COP; description and working of NH3; water system and Li Br; water (Two shell & Four shell) System. Principle of operation Three Fluid absorption system, salient features.

Module 5: Other Refrigeration Systems- Steam Jet Refrigeration System; Working Principle and Basic Components. Principle and operation of (i) Thermoelectric refrigerator (ii) Vortex tube or Hilsch tube.

Part C: Air Conditioning

Module 1: Introduction- Psychometric Properties & Processes; Characterization of Sensible and latent heat loads; Need for Ventilation, Consideration of Infiltration; Load concepts of RSHF, GSHF- Problems, Concept of ESHF and ADP. Requirements of human comfort and concept of effective temperature; Comfort chart; Comfort Air conditioning; Requirements of Industrial air conditioning ;

Text/Reference Books:
8. Stone, R. Introduction to internal combustion engines:
9. Whitman, W. C., Johnson, W. M., & Tomczyk, J. Refrigeration & air conditioning technology: Delmar

ME 13: Power Plant Engineering

Module 1: Introduction-Analysis of steam cycles, optimization of reheat pressure and degree of regeneration, coupled cycles and combined plants, process heat and power. Fuels and their properties, stoichiometric and actual air requirements, flue gas analysis.

Module 2: Boilers- Different types of boilers, boiler mountings, feed water treatment, boiler loading and manner of operation. boiler energy balance, draft system. Different types of furnaces
for burning coal, fuel oil and gas. Circulation theory, down-comers and risers, economizers and super-heaters, air pre-heater, drum and its internals.

**Module 3:** Steam Turbines- Convergent and convergent-divergent nozzles - theory and design. Impulse and reaction turbines, compounding of turbines, optimum velocity ratio, reheat factor and condition line, parallel exhaust, losses in steam turbines, steam turbine governing.

**Module 4:** Plant Components- Theory and design of condensers, air ejector and cooling towers. Types and applications.

**Text/Reference Books:**

**ME 14: Project and Production Management**

**Part A: Project Management:**

**Module 1:** Introduction to project management- Project Management: An Overview; Project Selection- Project Identification and Screening; Project Appraisal; Project Selection;

**Module 2:** Project Planning- Development of Project Network; Project Representation; Consistency and Redundancy in Project Networks; Project Scheduling- Basic Scheduling with A-O-A Networks; Basic Scheduling with A-O-N Networks; Project Scheduling with Probabilistic Activity Times

**Module 4:** Project Implementation- Project Monitoring and Control with PERT / Cost. Team Building and Leadership in Projects; Project Completion- Project Completion, Review and Future Directions.

**Part B: Production Management:**

**Module 1:** Introduction to Production Management-Introduction to Production Systems and a Generalized Model of Production. Life cycle of a Production System and Major managerial Decisions

Module 3: Designing Products & Services- Introducing New Products and Services ; Product Mix Decisions;

Module 4: Facility Location and Layout- Plant Location; Process Layouts; Product Layouts and Assembly Line Balancing. Cellular Layout; Layouts for Advanced Manufacturing Systems;

Module 5: Production Planning Over Medium Term Horizon-Demand Forecasting. Aggregate Production Planning;

Module 6: Operational Decisions over the Short Term- Inventory related Decisions. Material requirements planning; Scheduling of Job Shops;

Text/Reference Books:

(Electives in four Groups: ME*, ME^, ME+, MEX)

ME*15: Environmental Pollution and Abatement 3:0:0 [3]

Module 1: Historical perspectives

Module 2: Effects of Pollutants on Human Health- Human respiratory system

Module 3: Classification and sources of pollutants-CO, CO2, O2, N2 cycles – sources and sinks.

Module 5: Air sampling and pollutant measurement methods- Principles and instruments. Ambient air quality and emission standards.

Module 6: Control principles- Removal of gaseous pollutants by absorption, adsorption, chemical reaction and other methods. Selective catalytic reduction of NOX. Particulate emission control; settling chambers, cyclone separation, wet collectors, fabric filters and electrostatic precipitators. Clean coal technology and shifted emphasis on non-carbon sources of energy.
Text/Reference Books:

ME*16: Soft Computing Techniques

Module 1: Introduction- Introduction to soft computing; introduction to biological and artificial neural network; Introduction to fuzzy sets and fuzzy logic systems.

Module 2: Artificial neural networks and applications- Different artificial neural network models; learning in artificial neural networks; neural network applications in control systems.

Module 3: Fuzzy systems and applications- Fuzzy sets; fuzzy reasoning; fuzzy inference systems; fuzzy control; fuzzy clustering; applications of fuzzy systems.

Module 5: Genetic Algorithms- Simple GA, crossover and mutation, genetic algorithms in search and optimization

Text/Reference Books:
1. Konar, A *Computational intelligence [i.e. intelligence]: principles, techniques, and applications*: Springer.

ME*17: Vibration and Noise Control

Module 3: Continuous systems-Governing wave equation and Euler Bernoulli equation. Free and forced vibrations including modal analysis.

Module 4: Finite element analysis-Dynamic analysis of simple systems. Introduction to modal testing and system identification problems.

Text/Reference Books:
1. Meirovitch Leonard; *Element of Vibration Analysis*; TMH
3. Dukikipati RV Srinivas J *Text book of Mechanical Vibrations*; PHI

**ME*18: Advanced Mechanics of Solids**  3:0:0  [3]

Module 1: Simple Stresses & Strains-Elasticity and plasticity Types of stresses & strains, Hooke’s law stress strain diagram for mild steel, Working stress, Factor of safety, Lateral strain, Poisson’s ratio & volumetric strain, Elastic moduli & the relationship between them, Bars of varying section, composite bars, Temperature stresses. Strain energy, Resilience, Gradual, sudden, impact and shock loadings.

Module 2: Shear Force And Bending Moment- Definition of beam, Types of beams, Concept of shear force and bending moment, S.F and B.M diagrams for cantilever, simply supported and overhanging beams subjected to point loads, U.D.L., uniformly varying loads and combination of these loads, Point of contra flexure, Relation between S.F., B.M and rate of loading at a section of a beam.

Module 3: Flexural Stresses-Theory of simple bending, Assumptions, Derivation of bending equation: \( M/I = t/y = E/R \) Neutral axis, Determination bending stresses, section modulus of rectangular and circular sections (Solid and Hollow), I,T, Angle and Channel sections, Design of simple beam sections.

Module 4: Shear Stresses- Derivation of formula, Shear stress distribution across various beams sections like rectangular, circular, triangular, I, T angle sections.

Module 5: Analysis of Pin-Jointed Plane Frames- Determination of Forces in members of plane, pin jointed, perfect trusses by (i) method of joints and (ii) method of sections. Analysis of various
types of cantilever & simply supported trusses by method of joints, method of sections & tension coefficient methods.

Module 6: Deflection of Beams- Bending into a circular arc, slope, deflection and radius of curvature, Differential equation for the elastic line of a beam, Double integration and Macaulay methods, Determination of slope and deflection for cantilever and simply supported beams subjected to point loads, - U.D.L uniformly varying load. Mohr’s theorems, Moment area method, application to simple cases including overhanging beams.

Module 7: Cylinders-Thin seamless cylindrical shells, Derivation of formula for longitudinal and circumferential stresses, hoop, longitudinal and volumetric strains, changes in dia, and volume of thin cylinders, Riveted boiler shells, thin spherical shells. Thick cylinders, Lame’s equation, cylinders subjected to inside & outside pressures, compound cylinders.

Text/Reference Books:
2. Cook, R. D., & Young, W. C. Advanced mechanics of materials: Macmillan.

ME*19: Advanced Computer Graphics and Solid Modeling

Module 1: Introduction to application of computer graphics for visualizing concepts

Module 2: Introduction of hardware including operating systems- Introduction to Workstations, Graphic Terminals, Input/output Devices, File management and hardware limitations, Data Representation, Languages, Operating Systems.

Module 3: Graphic Packages- Exploration of various packages for illustration, drawing, desk top publishing page composition and animation. Introduction to the concepts of programming in media applications.

Text/Reference Books:
ME* 20: Finite Element Methods in Engineering 3:0:0 [3]

Module 1: Basic concepts- The standard discrete system, Finite elements of an elastic continuum-displacement approach, Generalization of the finite element concepts- weighted residual and variational approaches.

Module 2: Element Types- Triangular, rectangular, quadrilateral, sector, curved, iso-parametric elements and numerical integration. Automatic mesh generation schemes.

Module 3: Application to structural mechanics problems- Plane stress and plane strains, Axisymmetric stress analysis, three dimensional stress analyses, bending of plates.

Text/Reference Books:

ME^ 21: Advanced Fluid Mechanics 3:0:0 [3]

Module 1: Review of kinematics of fluid motion- Method of describing fluid motion, translation, rate of deformation, the material derivatives, acceleration, Vorticity in cartesian & polar coordinates, Reynolds transport theorem, stress at a point, velocity profile, wall shear stress.

Module 2: Non-viscous incompressible flow- Equation of continuity, Euler’s equation of motion, Bernoulli’s equation, circulation and its theorem, stress function, velocity potential, irrotational flow, two dimensional source, sink, source-sink pair, doublet vortex, superposition of source-sink with rectilinear flow, Rankine body, Superposition of rectilinear flow and doublet, flow around a spinning circular cylinder, Magnus effect, lift & Drag, Skin friction. Lift of aero foils.

Module 3: Boundary layer Concept-Introduction to boundary layer formation, Novier-stokes equation, Boundary layer thickness, momentum thickness, energy thickness, Boundary layer equations, Momentum-Integral equation – Von Korman, Blasius solution of boundary layer on a flat plate without pressure gradient, Flow with very small Reynolds number, Hagen Poisseeuille flow, Plane Couette flow, Hydrodynamic theory of lubrication.

Module 4: Compressible flow- Propagation of pressure change, sound velocity, elastic waves, Mach number, Mach cone, isentropic flow relations in terms of sonic velocity and Mach number, Stagnation properties, Regions of flow, Energy equation, Effect of Mach number on compressibility. Propagation of infinitesimal waves, Non-steep finite pressure wave and steep finite pressure waves, Expansion waves, isentropic flow with variable area, Mach number variation
and its effect on Flow through nozzles and diffusers. Area ratio, impulse function, Use of Gas/Air tables.

Text/Reference Books:

ME^22: Advanced Engineering Thermodynamics 3:0:0 [3]

Module 1: Review of laws of thermodynamics-Energy concepts for closed and open systems.

Module 2: Entropy considerations- Minimization of entropy generation principle and thermodynamic optimization.

Module 3: Energy- Energy analysis of thermal systems and plants; Thermo economic applications.

Module 5: Kinetic theory of gases. Distribution of molecular velocities and energy, transport properties of gases.

Module 6: Principles of irreversible thermodynamics and applications.

Text/Reference Books:

ME^23: Introduction to Human Body Mechanics 3:0:0 [3]

Module 1: Introduction to Biomechanics- Basic terminology and concept of human musculoskeletal system, anatomy and overall function.

Module 3: Biomechanics of joints-Structure, range of motions, musculoskeletal model of forces: (i) hip; (ii) knee; (iii) shoulder; (iv) elbow; spine. Lubrication of joints.

Module 4: Motion and gait analysis- Method, gait cycle, segmental kinetics, engineering approaches to posture analysis.

Module 5: Joint replacement and fracture-Fixation – stress analysis and basic design approach, failure mechanisms, wear in joint arthroplasty and bone remodeling.

Module 6: Biomaterials- Properties and application.

Text/Reference Books:
1. LeVeau, B. F. Biomechanics of Human Motion: Basics and Beyond for the Health Professions: Slack Incorporated.
5. Nordin, M., & Frankel, V. H. Basic biomechanics of the musculoskeletal system: Lippincott Williams & Wilkins.
7. Perry, J. Gait analysis: normal and pathological function: Slack.

ME^24: Tribology 2:2:0 [3]

Module 4: Film Lubrication Theory- Fluid film in simple shear - Viscous flow between very close parallel plates - Shear stress variation, Reynolds Equation for film Lubrication - High speed unloaded journal bearings - Loaded journal bearings - Reaction torque on the bearings - Virtual Coefficient of friction - The Somerfield diagram.

Module 5: Surface Engineering and Materials for Bearings- Surface modifications - Transformation Hardening, surface fusion - Thermo chemical processes - Surface coatings -

Text/Reference Books:
1. I.M. Hutchings, Tribology, Friction and Wear of Engineering Material, Edward Arnold
3. E. P. Bowden and Tabor, Friction and Lubrication, Heinemann Educational Books Ltd

ME^25: Turbo Machinery

Module 1: Steam Turbines: Types of turbines, constructional details, application of turbines, types of seals, and packing to reduce leakage, losses in turbines. Compounding of turbine, velocity diagrams, output efficiency, losses in turbines, reaction turbine, velocity diagrams, degree of reaction, constructional features of blades. Governing of turbines

Module 2: Gas Turbine: Theory and fundamentals of gas turbines, principles, classification, Joule’s cycles, assumptions for simple gas turbines, cycle analysis, work ratio, concept of maximum and optimum pressure ratio, actual cycle, effect of operating variable on thermal efficiency. Regeneration, inter cooling, reheating, their effects on performance. Closed cycle and semi closed cycles gas turbine plant/Applications of gas turbines.

Module 3: Jet Propulsion: Introduction, types of jet engines, application of jet engines. Theory of jet propulsion, energy flow through jet engines, thrust, thrust power, and propulsive efficiency. Turbo jet, turbo prop, turbo fan engines, pulse jet and ram jet engines, performance characteristics thrust segmentation. Concept of rocket propulsion.

Module 4: Rotary Compressor: Concepts of: Rotary compressors, Root blower and vane type compressors, Centrifugal compressors. Velocity diagram construction and expression for work done, introduction to slip factor, power input factor.

Module 5: Hydraulic Turbines: Classification of hydraulic turbines, Heads & various efficiencies. Impulse momentum principle, Fixed and moving flat plate and curve vanes, series of plates & vanes. Velocity triangles and their analysis, work done, efficiency etc. Impulse turbine: Main components and constructional features of pelton wheel, velocity diagrams & work done, condition for max. Hydraulic Efficiency, number of buckets, jets, Non dimensional parameters (speed ratio, jet ratio). Governing mechanisms for pelton wheel. Reaction turbine, main components & constructional features, types of reaction turbine (Francis, Kaplan), draft tube types, efficiency, cavitation, Francis, Kaplan turbines, Types of characteristic curves, unit quantities, selection of turbine considering various factors, specific speed, Application of similarity as applied to turbines, scale effect.

Text/Reference Books:
2. Gorla, R. S. R., & Khan, A. A. Turbomachinery: Design and Theory: Marcel Dekker, Inc.
**Module 1:** Introduction- Welding as a production process – its advantages and limitations. Gas welding process, Types of fuels, Acetylene, Indane, Butane etc. Gas welding equipment, Gas welding technique. Electric arc welding – Manual metal arc welding – Power supplies, cables and other accessories for arc welding, Welding technique - atomic, hydrogen welding, Thermit welding, soldering, brazing and braze welding.

**Module 2:** Special Welding Processes- Power sources, equipments and accessories, application limitation and other characteristics of: (a) Gas tungsten arc (TIG) welding (b) Gas metal arc (MIG) welding (c) Submerged arc welding (d) Electro slag welding processes. Resistance welding processes- principle-Types (spot, seam, projection, percussion, flash), Equipment required for each application.

**Module 4:** Weldment Testing- Defects in welding in various processes-Causes and remedies; Destructive testing of weldments - Strength, hardness, ductility, fatigue, creep properties etc. Non-destructive testing of weldments; Ultrasonic dye penetrant, magnetic particle inspection. X ray testing procedures and identification of defects – case studies. Weld thermal cycle – Residual stressed distortion in welding stress relieving techniques.

**Text/Reference Books:**
6. “AWS Welding Hand Book”, Volume 1 to 4, AWS.

**ME^27: Automobile Engineering**

**Module 2:** Engine Auxiliary Systems- Carburettor–working principle, Electronic fuel injection system – Mono-point and Multi - Point Injection Systems, Electrical systems – Battery generator –
Starting Motor and Drives – Lighting and Ignition (Battery, Magneto Coil and Electronic Type)-
Regulators-cut out.

Module 3: Transmission Systems-Clutch – Types and Construction, Gear Boxes-Manual and Automatic, Simple Floor Mounted Shift Mechanism, Over Drives, Transfer Box Fluid flywheel-

Text/Reference Books:

ME+28: Quality Assurance and Reliability 3:0:0 [3]

Module 1: Introduction-Definition of Quality, Quality function, Dimensions of Quality, Quality. Engineering terminology, Brief history of quality methodology, Statistical methods for quality improvement, Quality costs – four categories costs and hidden costs. Brief discussion on sporadic and chronic quality problems. Introduction to Quality function deployment.

Module 2: Quality Assurance-Definition and concept of quality assurance, departmental assurance activities. Quality audit concept, audit approach etc. structuring the audit program, planning and performing audit activities, audit reporting, ingredients of a quality program.

Module 3: Statistical Process Control-Introduction to statistical process control – chance and assignable causes variation. Basic principles of control charts, choice of control limits, sample size and sampling frequency, rational subgroups. Analysis of patterns of control charts. Case Studies on application of SPC. Process capability – Basic definition, standardized formula, relation to product tolerance and six sigma concept of process capability, Seven QC tools.

Module 4: Control Charts for Variables- Controls charts for X bar and Range®, statistical basis of the charts, development and use of X bar and R charts interpretation of charts. Control charts for X bar and standard deviation (S), development and use of X bar and S chart. Brief discussion on – Pre control X bar and S control charts with variable sample size, control charts for individual measurements, moving-range charts.

Module 5: Control Charts for Attributes- Controls chart for fraction non- conforming (defectives) development and operation of control chart, brief discussion on variable sample size. Control chart for non-conformities (defects) – development and operation of control chart for constant sample
size and variable sample size. Choice between variables and attributes control charts. Guidelines for implementing control charts.

Module 7: Reliability and Life Testing- Failure models of components, definition of reliability, MTBF, Failure rate, common failure rate curve, types of failure, reliability evaluation in simple cases of exponential failures in series, paralleled and series-parallel device configurations, Redundancy and improvement factors evaluations.

Text/Reference Books:
- D C Montgomery; Introduction to statistical Quality Control, John Wiley and Sons.
- J M Juran, Frank M Gryna ;Quality Planning & Analysis; Tata McGraw Hill,
- NVR Naidu, KM Babu and G. Rajendra; Total Quality Management; New Age International Pvt.
- Grant and Leavenworth ; Statistical Quality Control, McGraw Hill,

- Suresh Dalela and Saurabh ;ISO 9000 a Manual for Total Quality Management, S. Chand Co.

ME+29: Mechanical Handling Systems and Equipment

Module 1: Elements of Material Handling System-Importance, Terminology, Objectives and benefits of better Material Handling; Principles and features of Material Handling System; Interrelationships between material handling and plant layout, physical facilities and other organizational functions; Classification of Material Handling Equipment.

Module 2: Selection of Material Handling Equipment-Factors affecting for selection; Material Handling Equation; Choices of Material Handling Equipment; General analysis Procedures; Basic Analytical techniques; The unit load concept; Selection of suitable types of systems for applications ; Activity cost data and economic analysis for design of components of Material Handling Systems; functions and parameters affecting service; packing and storage of materials.

Module 3: Design of Mechanical Handling Equipment- Design of Hoists, Drives for hoisting, components, and hoisting mechanisms; rail travelling components and mechanisms; hoisting gear operation during transient motion; selecting the motor rating and determining breaking torque for hoisting mechanisms.Design of Cranes, Hand-propelled and electrically driven E.O.T. overheat Travelling cranes; Traveling mechanisms of cantilever and monorail cranes; design considerations for structures of rotary cranes with fixed radius ; fixed post and overhead travelling cranes; Stability of stationary rotary and travelling rotary cranes.

Module 4: Design of load lifting attachments- Load chains and types of ropes used in Material Handling System; Forged, Standard and Ramshorn Hooks; Crane Grabs and Clamps; Grab Buckets; Electromagnet; Design consideration for conveyor belts; Application of attachments.
Module 5: Study of systems and Equipment used for Material Storage- Objectives of storage; Bulk material handling; Gravity flow of solids through slides and chutes; Storage in bins and hoppers; Belt conveyors; Bucket-elevators; Screw conveyors; Vibratory Conveyors; Cabin conveyors; Mobile racks etc.

Module 6: Material Handling / Warehouse Automation and Safety considerations-Storage and warehouse planning and design; computerized warehouse planning; Need, Factors and Indicators for consideration in warehouse automation; which function, when and How to automate; Levels and Means of Mechanizations. Safety and design; Safety regulations and discipline.

Text/Reference Books:

ME+30: Simulation of Mechanical Systems 2:0:2 [3]

Module 1: Introduction-A review of basic probability and statistics, random variables and their properties, Estimation of means variances and correlation.

Module 2: Physical Modeling-Concept of System and environment, Continuous and discrete systems, Linear and nonlinear systems, Stochastic activities, Static and Dynamic models, Principles of modeling, Basic Simulation modeling, Role of simulation in model evaluation and studies, advantages of simulation

Text/Reference Books:
2. Robert E. Shannon; System Simulation: The Art and Science ;Prentice Hall
3. J. Schwarzenbach and K.F. Gill Edward Arnold; System Modelling and Control
4. M Close and Dean K. Frederick; Modeling and Analysis of Dynamic Systems ;Houghton Mifflin
ME+31: **Applied Elasticity and Plasticity**  

Module 1: Theory of Elasticity- Analysis of stress and strain, equilibrium, Compatibility and constitutive equations, Plane stress and plane strain problems, General equation in Polar coordinates, Rotating discs and stresses in circular discs, Stress function in terms of harmonic and complex functions, Equation of equilibrium of a deformed body in curvilinear coordinates, Principle of superposition and principle of virtual work, Torsion of thin tubes, Bending of cantilevers, Uniformly and continuous loaded beams, Bending of circular, elliptical and rectangular cross-section bars, Axisymmetric formulation and deformation of solids of revolution.

Text/Reference Books:
1. A I Lurie ; Theory of Elasticity (Foundations of Engineering Mechanics)
2. Gladwell G M Kluwer ; Contact Problems in the Classical Theory of Elasticity; Aca
3. Chakrabarty J.,Applied Plasticity; Springer-Verlag
4. R. Hill ;The Mathematical Theory of Plasticity, Oxford University.

ME+32: **Modern Control Theory**

Module 2: Control theorem and transformation- Discrete time control systems: sampling theorem, pulse transfer function, modified Ztransform, stability analysis.

**Module 5:** Parameterization techniques-Controller parameterization: Affine parameterization for stable systems, PID synthesis using Affine parameterization, Affine parameterization for systems with dead time. Affine parameterization of multivariable control systems.

**Text/Reference Books:**

**ME+33: Non-Destructive Evaluation and Testing**

**Module 3:** Magnetic Methods- Advantages, Limitations, Methods of generating fields: magnetic particles and suspending liquids Magnetography, field sensitive probes: applications. Measurement of metal properties; Electrical Methods- Eddy current methods: potential-drop methods, applications.

**Module 5:** Other Methods- Acoustic Emission methods, Acoustic methods: Leak detection: Thermal inspection.

**Text/Reference Books:**
1. P. Halmshaw :Non-Destructive Testing

**ME+34: Technology of Surface Coating**

**Module 1:** Introduction= Influence of different manufacturing processes on various surface and sub-surface properties; need of augmentation of surface properties; need from the view point of friction, wear, thermal barrier, erosion, corrosion etc.

**Module 2:** Techniques of different surface engineering- Heat treatments, dip-coatings, galvanizing, painting electro-depositions, physical vapour deposition processes, chemical vapour deposition
processes, thick coating processes (like plasma spraying, high velocity oxy fuel spray, detonation gun spray, cold spray gun etc.)

Module 3: Corrosion- Fundamentals of corrosion, types or corrosions and electrochemical protection, protective coating, corrosion measurement

Module 4: Experimental and Approach- Evaluation of engineered properties – control properties, response properties; surface geometry – characterization techniques (conventional and recent trends); coating thickness measurements – laboratory techniques and special techniques for accurate routine thickness measurements; adhesion measurement – conventional methods and recent developments;

Module 5: Tribology and Nano technology- Measurement of mechanical properties of engineered surface in nano scale; Evaluation of tribological characteristics of engineered surface in macro, micro and nano scale, simulation of actual application environment in tribometer

Text/Reference Books:
2. Nii Board ;Modern technology of surface coating with formulae & their applications, Asian Pacific Business Press,
5. Donatas Satas, Arthur A. Tracton ;Coatings technology handbook, Marcel Dekker.

ME+35: Mechatronics

Module 2: Essential electronics and Boolean algebra. Digital representation: Binary, Decimal, Hexadecimal, Conversion from Binary to Decimal and vice-versa. Binary arithmetic: Addition, Subtraction: 2’s complement, Multiplication and Division, Boolean algebra: AND, OR, NOT, NAND, NOR, XOR logic, Truth table, Realization of logic in physical systems: switches-LEDs, cylinders. Fundamental identities, De Morgan’s theorems and relationship with sets, Simplification, Electronics fundamentals: Review of some semiconductor devices, Concepts of Digital and Analog systems, Digital output (DO) and input (DI), Using switches, transistors, pneumatic devices, etc. to realize DI & DO Operational Amplifier: Principles, Configurations: Inverting; Summing; Integrating and Differentiating configurations, Digital to Analog conversion (DAC), The R-2R and summing Op-Amp circuit, Analog to Digital conversion (ADC), Successive approximation method, Flash method, etc. Programs for DI, DO, DA and AD for PC based plug in cards.

Module 3: Microprocessor, Computers and Embedded systems- Introduction to the 8085 (8-bit microprocessor) and microcontroller: Architecture, programming, I/O, Computer interfacing, Programmable logic controller basics.

Module 4: Sensors and actuators- Strain gauge, resistive potentiometers, Tactile and force sensors, tachometers, LVDT, Piezoelectric accelerometer, Hall effect sensor, Optical Encoder, Resolver, Inductosyn, Pneumatic and Hydraulic actuators, stepper motor, DC motor, AC motor.
Module 5: Control Systems- Mathematical modeling of Physical systems, System equations, Controllability and Observability, Pole placement, PID controller, Control of Hydraulic, Pneumatic, Mechanical and Electrical Systems.

Module 6: Integration and case studies- Integration of Mechatronics component subsystems into a complete Mechatronics system, Applications to CNC machines and Robotics.

Text/Reference Books:

MEx36: Design and Optimization

Module 1: Introduction to Optimum design. Introduction to detail design optimization by simulation, prototyping and optimum. Selection of configuration, materials and processes.

Module 3: Optimization techniques- Optimum selection of material & processes in mechanical design using material selection charts and optimisation methods.

Module 4: Applications- Optimizing product design functionality, aesthetics and economics by employing industrial design principles and by suitable selection of material & processing including use of polymers, composites and other non metallic materials.

Text/Reference Books:
2. Robert F. RHYDER, Manufacturing Process Design and Optimization, , New York: Marcel Dekker,
3. S.S.Rao ,Optimization: Theory & Application Wiley Eastern,
4. K. Deb ,Optimization for engineering design, Prentice Hall India
5. J.S.Arora, Introduction to optimum design, McGraw Hill

MEx37: Machinery Fault Diagnostics and Signal Processing

Module 2: Failure concepts and characteristics-Reliability/failure concepts. Application of diagnostic maintenance to specific industrial machinery and plants.

Text/Reference Books:
1. E. S. Tehrani and K. Khorasani, Fault diagnostics of a nonlinear system using a hybrid approach, Springer.
2. Paresh Girdhar, Cornelius Scheffer, Practical machinery vibration analysis and predictive maintenance, Elsevier

MEx38: Nuclear Power Generation and Supply

Module 1: Recapitulations

Module 3: Reactor Design- Principles, Safety classifications, Seismic quality group. Loading considerations under normal operations, anticipated operational occurrences, design basis accidents such as earthquake, loss of coolant accident (LOCA),blackout, flood, missiles, operator error, duel failures as applicable, Safety features for server accidents, standards, soft ware, verifications etc.

Module 4: Nuclear power plants- Types. Thermal reactors: BWR, PWR, PHWR, GCR, APWR, AHWR etc. Fast reactors Breeders; Fusion power; Off-land NPPs:- space power unit, nuclear ships, submarines. Economics of NPPs: Various costs, ROI, Sizing, Operational characteristics.

Module 5: Radiation protection and: Radioactive Waste Management-Radiation protection: Radiation hazard, Exposures, Exposure pathways, dose unit, measurement, and radiation
Module 6: Reactor Stages and Safety Assurances- Nuclear safety assurance.

Text/Reference Books:

ME39: Quantity Production Methods

Module 1: Introduction-Engineering production; Aim and objectives, history of progress, definition and requirements. Levels of production; piece, batch, lot, mass and quantity production, Mechanization and automation; need, degree and types of automation, Role of automation on industrial production.

Module 2: Classifications and methods- Broad classification of engineering production methods. Major sequential steps in industrial production; performing, semi finishing, treatments finishing and assembly at inspection at different levels. Quantity production methods of common engineering components; metallic rods, bars, plates, sheets, tubes and wire; shafts and spindles. Metallic discs, pulley, rims, clutches and cams; threaded objects; screws, bolt and nuts, and lead screws different types of bearings; xgears (teeth); comparison of the methods w.r.t. process, productivity, product- quality and economy automobile parts; engine block, piston, connecting rod and crank shaft. Methods of quantity production of cutting tools and tool inserts. Small size products in large volume; pins, clips, needles, metallic caps of bottles, washers, metallic utensils, chain links, paste tubes and coins; Quantity production by spinning, bulging, hydroforming, magneto forming and explosive forming.

Module 3: Applications of quantity production-Process planning and scheduling for quantity production in; single spindle automatic lathe, transfer machines, CNC machine tools, Design and use of jigs and fixtures in machine shops.

Module 4: Mechanization of quantity production- Group technology; principle and application in quantity production. Inspection and quality control in quantity production. Computerization and robotization in quantity production.

Module 5: Quantity methods for non-traditional processes- Quantity production by non-traditional manufacturing processes. Methods and systems of quantity production of various ceramic and polymer products of common use.

Text/Reference Books:

Module 2: Combustion in SI Engine- Initiation of combustion, stages of combustion, normal and abnormal combustion, knocking combustion, pre-ignition, knock and engine variables, features and design consideration of combustion chambers.- Flame structure and speed, Cycle by cycle variations, Lean burn combustion, stratified charge combustion systems. Heat release correlations. After treatment devices for SI engines.

Module 3: Combustion in CI Engine- Stages of combustion, vaporization of fuel droplets and spray formation, air motion, swirl measurement, knock and engine variables, features and design considerations of combustion chambers- delay period correlations, heat release correlations, and influence of the injection system on combustion. Direct and indirect injection systems. After treatment devices for diesel engines.

Module 4: Combustion in Gas Turbines- Flame stability, re-circulation zone and requirements – Combustion chamber configuration, materials.

Text/Reference Books:
Module 2: Conduction Heat Transfer- Applications of Heat conduction - Steady and Unsteady conductions - One dimensional steady state problems - Two dimensional steady state problems - Three dimensional steady state problems - Transient one dimensional problems.

Module 4: Incompressible Fluid Flow- Introduction - Governing equations - Difficulties in solving Navier- Stokes equation - Stream function - Vorticity method - In viscid flow (steady) - Determination of pressure for viscous flow.

Module 5: Applications of Computational Fluid Dynamics- Computer graphics in CFD - Future of CFD - Enhancing the design process - understanding - Applications - Automobile, Engine, Industrial, Civil, Environmental.

Text/Reference Books:

MEx42: Robotics: Mechanics and Control 2:2:0 [3]

Module 1: Introduction to Robotics- Robot, Robotics, Types of Robot, Robot classification, Types of Robot, Degrees of freedom.

Module 3: Sensors and actuators- Strain gauge, resistive potentiometers, Tactile and force sensors, tachometers, LVDT, Piezoelectric accelerometer, Hall effect sensors, Optical Encoders, Pneumatic and Hydraulic actuators, servo valves, DC motor, stepper motor, drives.

Module 4: Control of Manipulators- Feedback control of II order linear systems, Joint control, Trajectory control, Controllers, PID control

Module 5: Robot Programming-Language-overview, commands for elementary operations.

Text/Reference Books:

**ME P1: Project Work I**

The object of *Project Work I* is to enable the student to take up investigative study in the broad field of *Mechanical Engineering*, either fully theoretical/practical or involving both theoretical and practical work to be assigned by the Department on an individual basis or two/three students in a group, under the guidance of a Supervisor. This is expected to provide a good initiation for the student(s) in R&D work. The assignment to normally include:

- Survey and study of published literature on the assigned topic;
- Working out a preliminary Approach to the Problem relating to the assigned topic;
- Conducting preliminary Analysis/Modelling/Simulation/Experiment/Design/Feasibility;
- Preparing a Written Report on the Study conducted for presentation to the Department;
- Final Seminar, as oral Presentation before a Departmental Committee.

**ME P2: Project Work II & Dissertation**

The object of *Project Work II & Dissertation* is to enable the student to extend further the investigative study taken up under *EC P1*, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from R&D laboratory/Industry. This is expected to provide a good training for the student(s) in R&D work and technical leadership. The assignment to normally include:

- In depth study of the topic assigned in the light of the Report prepared under *EC P1*;
- Review and finalization of the Approach to the Problem relating to the assigned topic;
- Preparing an *Action Plan* for conducting the investigation, including team work;
- Detailed Analysis/Modelling/Simulation/Design/Problem Solving/Experiment as needed;
- Final development of product/process, testing, results, conclusions and future directions;
- Preparing a paper for Conference presentation/Publication in Journals, if possible;
- Preparing a Dissertation in the standard format for being evaluated by the Department;
- Final Seminar Presentation before a Departmental Committee.
### Annexure A
